

145th Knowledge Seekers Workshop-1110-2016
<https://www.youtube.com/watch?v=5pZSg3C29LU>

Mr. Keshe (K): Good morning, good day to you. As we teach and develop different aspects we see there is more need to go in-depth for understanding more and bringing more knowledge who work around the application of the foundation technology. We have passed the point of the 'surface' and basic teaching and are understanding more and more how our technology needs to be understood for different aspects and translating the knowledge.

K: one of the first things to do is to see if we can find if Alecz has been connected to the internet in Africa so we can hear from him and the Earth Council (EC) is completed. Then we can set up their work and go ahead.

Rick (R): I spoke with him and he is here.

Alecz (A): good morning.

K: would you like to introduce your self and give your vision? Let us know where you come from and what you see for the EC. You are a field worker and have done a lot of work with your knowledge and insight.

A: Alecz, I am from Nigeria, and was born to Lagos and moved to France when I was 17 years old and was there for 2 years and then went to England. I started working with the KF and I am very happy to be part of the Universal Council (UC) and I will try to work with all the council members with the best of my knowledge and hopefully we will bring the wishes in the planet and for the peace we are looking for. I will try to put more effort so we can enjoin the technology, flight systems. I wish for all the other members to work with the best of their knowledge so we reach process of our mission and objective. Thank you for including me in the council. I want to thank Mr. Keshe and Caroline and for letting me be a member of the Foundation.

K: thank you Alecz; you are a very hands on person. Can you tell us what is happening in Nigeria now with your ongoing work with the EC?

A: I work with the public and I don't work with the government. I am setting up a group that will start spreading the knowledge in the West African colony language. We should be ready in a few weeks. This will be done in Pidgin English. It is close to the English language. I am trying to organize other parts of Nigeria where there is not much Keshe knowledge.

K: what is your wish as an EC member?

A: because I have been to several places and seen so much misery my main wish is to elevate quality all over the world.

K: thank you; now we have heard from the 6th member and therefore all of the EC members. In the coming days we will announce the position of direct access to the EC. They can set up the connection with the world leaders. Thank you Your Excellency for everything you have done and are doing.

K: we have to announce that the KF has secured premises for flight testing as part of a governmental organization and we have permission to take over a flight building and in the coming weeks we will establish the first international flight laboratory where governmental scientists and world scientists with governmental structure can get together to develop and test all aspects of the technology. This is a very big move that came out of the joint cooperation between KF and governmental organization and this gives us opportunity for developing and testing the flight system within the structure of world nation government at the present time. This gives us a huge opportunity to bring the members of the Mozhans together in the next couple of weeks. We will announce where you have to be.

K: There is a lot of work to be done on the building to complete it. It is a huge effort. In the next 6 months we add the laboratory next to it so we can do the testing right next door. This is the next development of the space technology which means that the students can be hands on in testing, in developing and this is crucial for us. Hopefully by next Thursday we will have more insight. We are in the process and waiting for confirmation in the next 7 days announce the next step in the health program of the KF. This is the possibility that we will offer in conjunction with governmental organizations and health authorities for cancer.

K: We know a lot of people are waiting for the program and now things are moving to the next step. We do not cure and we are not healers. This is a process of re-organizing the body for what is on the health side. If we get the permission to go ahead we will announce an emergency or rapid workshop as we did with the blueprints. We know a large number of people are waiting. Once the process is completed it is in conjunction with a government and it's a joint effort between KF and governmental organizations. It becomes very much official work of governmental side of the KF. We are waiting for finalizing papers and when we do this we will go live and announce we will accept patients from around the world who

will come and receive health care in government hospitals. Hopefully we will have this done with two nations in a short nation.

K: if we see the opportunity to go to the next step to set up what we call the full space program in conjunction with a number of nations, we will announce that we are collaborating with at least 3 to 5 nations in space flight. The problem is how you put the knowledge together. I have received a lot of warning about bringing new technology no has knowledge of that can be dangerous in the hands of the public. My response to your fear is that the public is safe. The public have been safe and are safe in using the technology for the peaceful applications. Our biggest fear is the governments that may use the technology trying to control their subjects or other nations. In achieving the flight system we need to understand a lot of knowledge that has been shared and now we need to go in depth with it.

K: for example we started last week with a soft touch of the production of deuterium (?), hydrogen and tritium. Even our own innovation groups have tried to replicate and they find different difficulties in implementing and applying the technology and being able to achieve such a position. I would like to expand on the knowledge and in this way that we need to understand the totality.

K: we try to explain more and more in the science of the technology. What this means is that we better understand the totality and structure of what we are doing. (26.14 minutes). Last week we spoke about the use of what we call the atomic hydrogen. But what was interesting was that when we spoke about the atomic hydrogen, our people went to the extent of testing it. Interestingly enough, for example, what we have seen from different groups is that different people apply the technology in what they see. It is better to understand the totality. We said that it is better to use aluminum foil. Some people use small strips, some use big strips and added this to the two cores.

K: this caused a melt down or heating up and not seeing the interaction. I said before, test with the cold caustic before you endeavor to test in your cores. We see people who don't see immediate results and they get disappointed and think it doesn't work. Always remember that for the seed of the star, galaxy or planet to be created it takes millions and millions of years for the process to complete and for the process of the two magnetic gravitational fields of the same strength to come together.

K: it is very much the same as when a child is conceived. Millions of sperm try to reach the egg so that they can start the life. It is the same in the Universe and in the reactors you make. Just because you released one atomic hydrogen from aluminum you think that now this process has to stop. You have to understand that in that process you have to find the matching plasmas and allow the system to gather strength to process the fields across the core. You plug in and that is it and immediately you think there is something wrong. When you started the use of any of the hydrogen or gaseous systems or gans systems now with the liquid plasma you need time to start to develop the plasma condition for flight. The initial step takes times. If you become expert at it, it is like baking a cake and you turn on the oven, measure all the right things and you get the same cake all the time. Humanity is not at this stage yet.

K: we have not perfected the art of understanding the totality of the plasma. This is the problem. Until we develop such a measurement we have to test and try. Some of you who put the small strip of aluminum and put the caustic and wait for it, it might happen. It takes time. By releasing more and more hydrogen atoms from any interaction you increase the possibility of two matching hydrogen. Hydrogen released by aluminum foil the way we discussed last week is exactly like the snowflake. It is literally impossible to find two snowflakes that are exactly the same. Just because they are snowflakes doesn't mean they are all the same. Just because there is a hydrogen release by aluminum doesn't mean that is the matching hydrogen. You need to trim it like a flower and allow it to manifest its beauty and strength and find its match and gradually allow it to come into operation.

K: with one you set the standard for the others, with two you dominate the strength, the shape of the plasma and you take control. I spoke with one of the teams and they put 5 to 10 centimeter of aluminum foil and put it into caustic. The reaction was so high that it literally melted the core. Of course it does. Go back to the understanding and the process of understanding. You need to release a smaller amount of hydrogen so it can interact with the fields and not become part of the whole structure. When you go to produce hydrogen and then use it even in the condition of deuterium and tritium you have to allow the process of time. Don't put full flat foil but take that foil and crush it and make it into small tight ball as possible, not flat and then put it into the core. The interaction of the caustic is slowly released and you can harvest the power of the hydrogen.

K: you reduce the surface and you create a compact mass and then you have to understand your condition of the creation of the hydrogen has to be very, very controlled both in all the cores and in one core or the other. One can reach but the other one might be delayed. You need time and you need to allow the plasmas to interact. Once you put the aluminum foil in this one and you created the hydrogen and now the problem you have goes back to the beginning. You literally have to find the connection between the plasma here (34.20 minutes) and the plasma inside the core, but outside the boundary in a bigger core. Until you don't find interaction between these two you don't get gravitational fields. It was so hard to find the first atomic hydrogen in this one to match each other to start the process. Now you have to find one that matches both of them. The process you have different conditions and different ways of doing it. You can control it to bring everything into line or you can leave it by chance.

K: I have explained this many times before in the other teachings and now I repeat it again. Maybe it will start making sense. If you remember I told you a long time ago in the teachings to get yourself a mixer and when you have a gas shake it with the mixer. It brings this process much closer and now you understand why we taught this before. Now to you it is nothing. But inside if you can mix it with a blender, you produce and put inside, you homogenize the deuterium, tritium and the hydrogens that are inside. If you do the same by putting wings on this side of the core you do the same (36.23 minutes). Now you repeat the same process. You cannot do it without it, because it is like an ignition or a starter motor.

K: This is what I call the fast speeding machine with the highest rotation of the core with the wings on it. It brings most of the fields together that are the same and the process starts. If you look back at every core which we have made, even the gaseous cores, this mixing system has been used. Go back to the energy system we built in Italy 3 years ago. The inner core had phalanges on it and the bigger core has mixing phalanges on it. These are specially done to create this condition. When you don't bring such a high speed and mix the hydrogen atoms and molecules in the gas state of the plasma that the same strength comes together it becomes impossible for the system to operate. It takes a long time. In a way with the higher speed, very high speed from 5000 to 7000 rotations in mixing, you bring up most of the energetic plasmas ready to operate and interact into one structure as a plasma.

K: those who understand this and do this will find they get response. You can do these two ways. You can put the high mixer in it or put a very AC voltage across the cores. This is the advantage of using AC with the plasma. You literally put electric shock on the AC which is exactly like whipping (in a blender). This will give you what you want. You should be able to start flying and you can test your flight system. You can start understanding of the whole operation of zero point energy. It means concentrating the whole energy into the center. And then as you are rotating with what you have as gaseous structure in the second core you get is the very easy operation of the fields across very easily the totality of the balance of the balance of the fields here with the planetary (40.15 minutes) balance and the flight system.

K: Scientific organizations are testing it and we hear some have seen some results but they cannot extend it. The process is to not look at the matter state and what you see physically but understand what the fields are doing in the background as the field interaction. And then you set your system up. One of the first things you will feel is the field interaction. The minute you feel a field interaction it means that you are entering the flight zone. It means all you need to do is compact these fields somewhere so they give you physicality of the closure of the plasma to become independent and secondly as this is getting developed the interaction between the system and what I call earth gravitational magnetic field pushes the system to find its position. You need to introduce this high speed rotation of the plasma to be able to ignite the interaction of the plasmas into fields. (42.12 minutes) In some cases if you are good at it once you start the high rotation of the fields in the center this creates the rotation of the fields outside. You don't need to rotate the body.

K: Flat, smooth surfaces are useless because the gases create their own field resistance interaction. One of the ways which you can change the position is that you can literally go and extract energy. What does this mean? We keep you from now on very much in touch and in balance with work of the KF innovations. (43.12 minutes) the innovation people are listening in the background and they know some of them are working with this condition. What you need to do is to use the system for both flight and energy. For example you put the aluminum foil bundle here and you put another bundle here (43.33 minutes) and you can leave the center core with CH₃ or whatever you want. Or you can do it with alkaline and control with acidic or you put acidic here (43.57 minutes) and you put alkaline there. But the

production of the fields in between the two gives you the interaction you are looking for.

K: what we see is very simple: it is the interaction of the fields which allows you to create the condition of the field interaction and in the process of doing so you start creation and the change of the process to create new and complete structures. (44.50 minutes) what this means is that from now on you decide on the shape and the strength. From now on you decide on how the fields will show themselves. Any of you who understand this should be able to create a system that can create Magrav positioning which we call the cornerstone of the whole work of space travel.

K: what does this mean? It means the plasma inside the inner circle, the inner core, the Caroline core plasma has to create enough fields that internally itself it creates Magrav positioning in respect to the solid core or the second cored and in that position allows the lift of the core into the center core to the middle. So what happens is that when you start your first load in your hydrogen production inside has the three cores sitting inside each other. (47.00 minutes) By adding and creating the hydrogen plasma in the outer core this (innermost) core will come and centralize itself first (47.09 minutes). Then this (middle) core will centralize itself. Then all 3 start moving and what you get is the 3 core center and the reaction of the fields in these three will give you the layers. (47.37 minutes) The interaction of these three and the gravitational field forces allows the interaction of the flight system.

K: if you look, by creating the 3-core layer you have done the same thing as creating a star formation and creation of what we call what you need to create the skin of the man. It is just in another form. When you become expert in it you don't really need these two cores because you manage to create 3 layers of plasma of different strength in the center that gives you the same effect. How do you do this and how do you create 3 different types of plasma in the center? It's very easy.

K: it is as easy as drinking a glass of water. Go back to what I said a few minutes ago. Just because you put aluminum in doesn't mean that you created all the same hydrogen. (45.54 minutes). The hydrogen which is connected to CH₃ is a different type of hydrogen which is connected and used with amino acid. So what you need to do is make the choice the way you chose aluminum and choose 3 different processes. They give you three

different types of hydrogen. In one core you create the three layers. (46.48 minutes). But this needs maturity of the knowledge. Instead of running 3 cores you can do it with one core.

K: I'll give you an example. Test your strength, knowledge, and understanding. Go in the kitchen and get the highest speed mixer. The medium we chose is CH₃. Choose distilled water and put it in a container and add the water to it. Now, as I have told you this before, put a bit of chili in it. Now put the mixer in the water and use a very high speed (47.58 minutes). You will be smelling chili in the whole house if you run the mixer for 5 minutes. People upstairs will start crying. Now you need the second so add garlic and keep on mixing. The house will stink of garlic and chile. Now go further and get some ginger and add it to the container. If you had confined the whole thing, this system will fly. Water is crystal structure of a gas. And when you have crystal structure and you can control it, it is a gans condition in nano state.

K: the only thing you did with the cores was to confine it and it cannot escape. If you can create 3 different speeds of rotation in this box you will get what you want. But unfortunately in space we don't have a mixer so we don't get cylindrical objects. All of you are so close to the space flight system and it amazes me that none of you dares to test. If you have a problem with the hydrogen, understand the totality of the mono atomic structure in a simple way as I explained in a teaching this week. What if I can make hydrogen gans, nitrogen gans and oxygen gans? Go to the atomic nuclear structure and understanding.

K: hydrogen has a proton, neutron and electron. (51.24 minutes). Now go to the extreme and directly to oxygen. It has a proton, and it has a neutron and an electron. This is Hydrogen (52.50 minutes) and this (circle) is oxygen. You say that oxygen has so many.... Yes. Now you have a second proton, a second neutron and a second electron. Then you have the third proton and you have the third neutron and the third electron. (52.27 minutes) notice one thing: not all these neutrons, protons or electrons are the same strength. The initial ones are and all the elements have the common denominator of hydrogen in the center. Anything about hydrogen has that first and then what is additional. When you use gans of hydrogen, then you use the gans of oxygen and then nitrogen they all have the common denominator in all of them. This is where you find the gases together as gans.

K: don't forget if you have nano-coated and then you put CH₃ for example as the base gans you are already working in the totality of the plasma conditioning. If you understood you can use any gas gans to be able to achieve much more rapid conditions. You have already achieved this when you use the CO₂ and the CuO₂ as the gans in the liquid and you put the high rotation or pressure on it and you saw the vacuum. Now you can go to the gaseous level and produce the gases. They allow the common denominator to come as a gas matter state to be part of it and you achieve this.

K: I explained to this to one of our innovation groups. (58.29 minutes) if you get your 3 circles, 3 balls, or you get this gas combination you can roll this ball on the floor. What you will see is very interesting. This is the ball you are rolling and you will see this (58.55 minutes—erratic up and down movement). The interaction of the 3 layers of gas continuously have to interact with themselves and in balance to the gravitational magnetic field brought dynamic inertia and plasmatic gravitational magnetic field will create the condition of the positioning. For the first time you will see the process of the motion of the electron in respect to proton or nucleus where now the electron is the ball you are rolling. The matter state ball if you roll it correctly and don't kick it up will roll flat. The plasmatic ball will not roll flat because continuously in 3-dimension it has to find its position. This is why we saw people that tested this lost their ball and they couldn't find it. That ball has flown somewhere to find its position. Would it hit a satellite? We don't know. Would it end up in Planet Zeus? We don't know what was mixed in the mixture.

K: is it embedded in the body of the man and it will never show itself? Quite possible. Is it embedded in a structure somewhere? Probably. Is it connected through the gans the man made with his amino acid to somewhere that man has control? If man wants to find it, he will find it because it comes to the emotion of attraction. This is the reality about the space technology in its true form and understanding the totality. You can fly with it, the plasma and the electron, if you understand how to harvest the energy with it that it creates the needed gravitational magnetic field in respect to its environment. Here the ball finds its position in respect to the earth's gravitational magnetic field. Here as the electron it finds its position in respect to the proton.

K: Any of you in your kitchen can create; you have a mixer so test it. Extend it and most of the mixers you buy these days, you are spending a lot of money and the machine is in your hands. Have you seen it? (1.02.27 minutes) It has the blades. The reason when you put the ginger or whatever inside and achieve the scent that you smell it and you know you have managed to create the condition of gans state. This is because the ginger, garlic and chili are vegetables and already have the amino acid of the 4 gases. It is a very precise position. All you need to do is encapsulate it. \$6 will give you a flight system. (1.03.48 minutes). If you can make the mixture in circle ball you will find you don't need to hold the mixer and it will find its own position in respect to the table but you have to know what you are doing. This is how the amino acid in the body of the man finds its own position I respect to the other cells within the structure. The cell of your kidney does not appear in your toe.

K: Now you understand and any one of you who understands this is in the position of the flight system. It is you who has to understand the totality of the knowledge and this is what we explain as we go more and more in depth to simplify the knowledge because the more we understand the knowledge and it is easier for us to be able as one entity. This is why we choose and we have chosen this structure. Many times I work with these mixers and I say "when will the man mature to see that they have everything in their hands?" The beauty of the knowledge of this planet is that man has created simpler versions to achieve the space technology to become a man of deep space and he cannot see how to use the tool to get there.

K: These simplified machines that man has created have taken thousands of years for him to achieve this. Now it makes the development of the space technology much, much easier but you are not aware of what you have in your hands. You are always looking for harvesting to achieve the easiest, actually the minimum result. With the knowledge of man he has the beauty of being able to use the state of the plasma and the state of the matter also. And he can use one for the benefit of the other. One of the problems when you use these mixers is that they have explained the process in the matter state. as people never understood the effect of the vacuum they create and the effect of the positioning of the gans state of the molecules of the vegetables you use can give you the same condition of what is needed and is

operating within the center of the planet, within the center of the stars and within the center of the galaxy and the universe.

K: Man has created with the tools he has the shortcut into deep space travel but he is so busy with the matter condition of the materials that he cannot see how to use it. And it is for us to enlighten. You have been buying these motors to do this and this. If you get it right and you can control it and you can nano coat it for you to be happy with it, your mixer can be used to create homogeneous plasma gans that give you what you need. But there are steps you have to take. You can't just buy a mixer and then say it doesn't work. Understand the process. I have explained this many times before and nobody understood.

K: go back to the teachings of the last 3 months. I referred again and again to this mixer and putting the chili in the water to see what you smell. You homogenize the fields. And why does it spread around the house? Because you need one cell to become in its crystalline structure and it takes on the size of the whole house. All you need to do is to add more into the plasma so that the crystalline structure has more fields to expand into. But if you can find it in a container now you can use it. Don't forget that in the end they all have the same denominator. I give you another tip: you have in your structure in the kitchen a CH bond—synthetic wires. You can use these for nano coating condition to contain the material.

K: so now you understand unless you want me to feed to and hand it to you and then you say it was here and we didn't see it. All of you can start the first test and the condition and you have to understand what you are doing in creating the first space reactors and you see their flights. You create it and when you mix it and get it to the right point you feel a tingling feeling in your stomach first. You feel it in your back and shoulders. You feel it, if it is strong enough, in your emotion and then you feel it in your soul because the higher the speed and continuous rotation that you do, the more you bring more of the same in the center. There is a piece of information that I will like to share that I have kept away from you, but I have been to it many times.

K: what I would like to explain so that you understand is this: (1.12.28 minutes) you have magnetical field and you have gravitational fields. In all my teachings I always say that here as more of the magnetical strips off the more the stronger gravitational field appears. So, what I like to do is to open

this field for you to look into. If I open this you will see something I have explained and you don't understand. In this you have this (1.13.21 minutes). In the outside you magnetical inside the same field and inside the same field there is a gravitational pull. The more you give off that is magnetical the stronger gravitational you manifest. You peel it off. Now if you understand this, look at the cores, the mixture of the herbs (garlic, ginger and chili). The more you let out the stronger fields you bring back in. As they do you create a dynamic rotation in both ways and your cup will fly.

K: a magnetical field is not just a magnetical field, but even with the stronger in its giving it still has a central taking. A field, a plasmatic field, is a ray of light. It is the structure of light. Read book #2. The light is a field. It is the interaction of the magnetic field that you don't see. If man develops systems that can see all the interactions you will see the light coming from the interaction of the fields. This is where you go into deeper knowledge of the universe which is that you can fly with the plasmatic fields of a light.

K: As you understand the light itself has gravitational and magnetical properties. This is what I explain in teaching recently. Why in some cases this has confused the world of science so that why does it behave sometimes as a particle and sometimes as a thought? (1.15.45 minutes). Light behaves as a particle when it is in the plasmatic condition in the motion of a higher order. When the attraction of the plasma with its environment gets peeled off, it creates a weaker gravitational magnetic field plasma which in respect to the plasma of the proton speed that creates the light. It creates a weaker plasma which man has not understood that even a photon itself is the disturbed unbalance fields of the plasma gravitational magnetic fields and we see that if we absorb and observe this we call it a photon. If we absorb and observe the total plasma itself, we see the behavior of a particle. (1.17.00 minutes).

K: that is why there is confusion. The photon comes from the interaction of the fields of the plasma itself with the environment at the lower strength and plasma of the total interaction behaves as a particle. So one is the father and the other is the man and the world of science has a problem understanding this. Any ray anywhere in the universe is not singularity as it is moving somewhere. It has to find a position in respect to something and depart from another position which is not within it. When we say 'within it' we mean within the structure of its gravitational magnetic field strength of the spectrum.

K: so if you understood these points which we go into more depth to become much sweeter, physics is fun if you understand the simplicity of the knowledge. When you make physics more complicated to show you are a wise man, you are a 'fool' man because you have fooled yourself to think you are wise because you have not understood the wisdom of the sweetness of the size of the creation. Understand the totality of interaction of any fields, a ray of singularity does not exist; it is impossible in its manifestation of its strength in respect to its destination.

K: we come to another point and now I hope some of you can fly and some of you can understand. I hope in a short time that many of you will go into space, but we wise. Carry the purity of the soul and understand that man is not beyond any others or behinds any others. Man has created a culture of its own with its knowledge and it is beautiful. It has made production of systems of the universe much, much easier but because you don't understand and you haven't gone into the depth of the knowledge of the interaction of the plasma, the true science of the universe, everything looks irrelevant or not applicable. You have all the tools—every tool to go into space is in the hand of the man.

K: you have managed to extract matter in different shapes. You have managed to understand that the interaction of the matters can create separation of the molecule into atomic with the caustic like nano coating. You have managed to create the knowledge that now you can separate the single atom from the structure of molecules. Now you have reached the singularity of the plasma. It has taken man millions of years to understand it, but in fact the first pot you used to cook you already became nano material producers for thousands of years.

K: the important point is to understand the separation and the interaction. Then when you understood what we just explained a few seconds ago in respect to interaction of different fields which will give you the interaction or manifestation of your space ship then you understand that every layer has two operations--(1.22.14 minutes) one of its own and one of the interaction with the others within its vicinity. So if I change the environment here to keep this I have to understand the interaction of number two. (1.22.45 minutes). And I have to understand if it changes, what happens. When you produce a different environment of the plasma, you have to watch the operation of what has been happening.

K: man has been aware of this, but for his own benefit of ignorance has denied the knowledge to himself. I open this and have a look at what you will see. (1.23.27 minutes) The green, the blue and the black—here I create a different environmental condition and here I create still a different environmental condition.

K: The skin of the man—the 3 layers of the plasma. As the environment inside the flesh of the man due to different strength changes; the middle layer changes and the out layer changes and you get different textures. What happens in this environment as this changes so does the outer, the skin of the man? In Africa there are different conditions that give you the beautiful black. As you move to less dense areas and you need to absorb more, the change of the environment changes the fields here so that the color of the man changes to white. So, the environmental plasmatic conditions dictate the second layer's condition so that the outer layer shows how much of the fields it needs to absorb or regulate. So the color of the man is middle skin deep because the inner and the rest of the flesh stay the same. Those are why races have not understood the simplicity of the creation.

K: It is the environment and the change of environment should have brought maturity to man and not the foolishness of races. It doesn't matter where we take the man; these two layers will change. Turn the process upside down and inside out. Look at the plants. This is what I was explaining in the teaching yesterday. You see to go from black where one of the races of the man was initially created to become blond and white. Because of the change of the environment the interaction of the middle layer has taken millions and thousands of years to absorb more of the plasma of the universal energy they have to change the openness of the atomic, molecular structure so they can absorb more. In fact they absorb very little. It had taken thousands of years to be able to live, but if man was to look at the same thing, the simplicity it is the shame on the face of those who are color blind to the color of themselves. (1.27.46 minutes)

K: you imagine what happened to the man, how the process is and how the change in the environment brings the changes to the skin of the man. My friends you don't need to look far. The ones who are cleverer than a man do it once or twice a year but the man has been blind to it. The vertical people (trees) have used this, what man has used for millions of years to evolve. As the summer changes into autumn and the environment changes the green

changes to orange and yellow. So the yellow skin of the man, the green skin of the man—man doesn't understand how the vertical animals have already achieved this. They use it to change and to protect themselves.

K: if you want to see the process of the evolution of the color of the skin of the man, go into reverse and look every year into a plant. The leaf that drops everyday is the condition of the change of the environment which allows the outer layer to change its reaction to its environment. In that process the interaction with the inner side allows for the reduction of the energy from the environment and the leaf goes yellow and then it goes green and it goes black. How foolish man has been to use the color of the skin as the point of its superiority.

K: it is important for man, as I have always said, if man doesn't see the knowledge because the atom is too small, then look at the structure of the stars and the solar system. If you want to see the process of the evolution of the change of the color of the man look at the vertical people (trees) and the way they change. They became so clever that by the slight change of the atmospheric conditions they change their color so rapidly, within two day. It has taken man millions of years and because he never understood it he has used it to claim himself superior. Shame on man. As I said the vertical people are much more clever than man; they have chosen to stop chasing the food and stand and absorb the energy of the universe.

K: as chasers you think you are clever. Now you understand how a reactor, the skin of the man, and the life of a plant are all the same. It is the condition of the environment which allows you to fly, change your color or shed your leaves. This is the maturity of the science; if you understand it you become colorblind and race blind, as every race in the universe is part of the same structure you have been created from. Until we don't achieve that we have the miseries we see in some nations where the actual narrow mind of the man gives him the same as what he calls himself, *the king of the animals*. If he thinks he is the king of the man because of the color, he is more narrow minded.

K: the science of the universe is the same and it is for man to understand the connection. The same goes with the color of the fluid to keep its condition in the inner part of the body of the man. It is for you to be red and for the man from Planet Zeus to have a different color. In fact the blood of the man is not red until it is exposed to the air that it shows its color.

K: you might hear some buzzing noise as I connect to my charger so we don't get cut off. Any questions?

Rick (R): Lars says free energy will change the world, so why Mr. Keshe will you not tell us how it goes with the solid power generator, the newer power generator?

K: we are changing it to a solid state producing large amounts of energy. This is being done by 2 or 3 different groups.

R: is that related to what we see on the diagram now?

K: no. Actually one aspect of producing energy to plasma is very simple. I was teaching this to the innovation groups in the past few days. If you look at this you can extract huge amounts of energy out of this if you look at the position. If you create the plasma here (1.36.21 minutes) and you have created the plasma here, if you can understand that this plasma is rotating in the same or opposite direction to this, then if you make your probe inside this, you can extract huge amounts of energy from 2 very strong plasmas. But this needs a lot of understanding. You have to know how to probe it. This is again is the plasmatic generator that you can use in space.

K: It is very simple; you have these pain pens. If you managed to probe the pain pen and the way the pen was giving energy into the body of the man, then if you design your design the central core of your pen in a different way, you can extract a lot of energy from the core—not from the Caroline core but from the middle core (1.37.43 minutes) as the energy between these two. What you can do is fill the middle core totally with one kind of liquid and compare the difference between these two. You saw it getting light and you can tap into that energy.

A: instead of probing this core, why not be the receiver?

K: good morning!

A: thank you.

K: If you hold the ball in your hand you become the receiver for whatever you need and it feeds you to the totality. This is what you do when you hold the pain pen in your hand. When you hold the ball in your hand you are so passive. But when you hold it you feel that you receive what you need, but don't forget that these are energetic. You only feed one and if you can make it dynamic it feeds you everything you need. But don't forget which hand you put it in and which side of the brain you want to feed.

K: When you give a pen to a person always let them hold it in both hands, not just one hand. As they say, you receive with the left and you give with the right. If you understood what I explained, even the magnetical has gravitational inside it. You need to feed both sides of the brain of the man, so hold the pen in both hands.

K: what we call plasmatic reactors are being tested now and are in development. The solid state generators are getting finished by a couple of groups. Then the wireless transmission will come. We cannot separate them; it is an impossibility. In one of the innovation groups a few weeks ago they were producing so much energy that they are bringing in salt water and they said this cannot be done. The problem is not producing the energy. The problem is bringing the energy to manageable, usable energy. 100W or 50KW is not a problem but in the house it burns everything down. It has to be brought to manageable energy. We are now in the process with governments to produce 100 Megawatt systems. It is much easier to produce with high plasma than with low. In the coming weeks we will show this and you will see. We have to bring it to a safe position to be applicable and be used. If it needs to be used for 50 or 100 Kilowatts it is very easy to do. But we have to bring it down to be manageable.

K: The plasma generators as I have shown you, some of you can produce yourselves as you can the Magrav units. Some of you went and bought the motors. If you connect your mixer to the battery operated system off the grid you can feed it back and it can run all the time. And you can feed it to the plasma of itself. In time you will see how it will be done. We don't hesitate even when we get it wrong. We develop until we get a breakthrough. Everytime we do a small change in production it costs a huge amount of money and takes time to get it licensed. This is what we are doing is using the structure we have so with any alterations we can use the same licenses. This is what it is going to be and you will see the whole process. We are not going outside the parameters; we are just extending them.

K: I do not make a system just to deliver it. I teach it so others can understand it and it can be copied by other people. When I showed the coca cola bottle everyone said I was a crook and everything else. Now you are all doing it and there is no crook. When I show a flying system it is the same. This is literally what Tesla suffered from. Scientists, because they don't serve the church are the curse of humanity. They serve the knowledge of the

man and they act as if the church doesn't exist. That is not the physical church, but the path of the believer. This way I don't make one Tesla, I make Tesla out of many and it is beautiful to see that is happening.

R: we have a question from Walter. Because of the high hydrogen compound in caffeine, can we use caffeine instead of chili?

K: why not? Who says we are wrong? We are right! Let me explain the beauty of this. Those of you who look at the vegetation and the herbs look at these things. You are 1000 times more advanced than those who are using the aluminum foil. Because it is already in the gans state. It is already connected to amino acid and you can use it to control it much easier. The ones who choose the path of the matter, the aluminum or whatever, then they have a problem with the control later on. Then they have to find a common denominator. When you use amino acid based entity like vegetation, seeds, trees, fish oil you are already a step ahead of those in the matter state because you are already in the gans state with the conversion of the strength which is the body of the man. Why not?

K: None of us is wrong; this is the beauty of the knowledge. We have to understand how to use it and nobody is more clever than the other because they twist the wire slightly this way and now they created or they can produce the gans—now I taught everything to Keshe and I am the teacher. When we teach, we teach the full spectrum from energy to matter to space travel and the meager man is happy with the color of the skin.

K: Vince come in and explain about the addition to the broadcasting that you have brought to face book.

V: yes, this is our first time to broadcast live on Facebook. I'd like to welcome everyone who is watching there and our video will be available on our facebook page. And so we will continue to broadcast live on facebook as well as live stream and Youtube. We always want to reach the most people possible.

K: would you like to tell us where to look for it?

V: you can see it directly at [facebook.com/keshefoundation](https://www.facebook.com/keshefoundation). You can do a search for us and also on our home page there is a link to the facebook page. I'm sure people can find this on facebook. The live comes up right away.

K: thank you very much. Any other questions?

Heather (H): hello, this is Heather. Is it okay to go back to a thought about the blender?

K: I can imagine what you will be doing very soon; better wait and see.

H: one thought was to combine information on how the mouth works and the enzymes. With the blender and garlic and other natural vegetable material would it be useful to spit in there? The mouth enzymes will help to receive the CH bond and you have the atomic hydrogen in there. And then you could somehow collect that in a nano coated ball with a tube to suck it out from the blender once it is elevated?

K: let me go back into something that will make life easier for some of you. This is what we are teaching in the agriculture. As I said, you need different strengths of hydrogen for the gans. If you look at the color of the leaves, no two greens are the same color because they use different kinds of hydrogen. You can even use different leaves of the green to create the gans and that will help a lot in producing homogeneous gans material but in different strengths and layers.

H: I was thinking of using the leaf from the top of the tallest tree and the root from the lowest root and that would give me a range.

K: why not? You are never wrong; nobody is ever wrong. We haven't got a professor we have to follow. We are all professors, so why no? Yesterday we were talking and everyone was looking for a definite source of food and we get all the nourishment and everything we need from it. I was explaining in a simple way you might come to use it in the coming time. You have to understand the body of the man and what it rejects is a combination of what it has used and what it needs. It is a balance of material which might not be the right strength. But the strength of the material is available when you need it for the body.

K: In time you will hear, and there is a lot of call, not only what we called, but for the upcoming disasters we have had for millions of years. as the strength of the magnetic gravitational field plasma of the earth is getting more and more weaker in respect to the sun so it is getting more and more confined and gravitational-wise it is stronger and magnetic-wise it is weaker.

K: We see rapid motions within the structure and we see more and more interaction of the solar flares magnetic gravitational field with the planet earth and it injects energy to the planet. This is inevitable and we are in the process of reversal rotation if not in times of hundreds of thousands of years but to go through that process and what we see now is the separation of the continents (North and South America). In time of disaster how do you feed yourself so that you have everything? A man carries everything with himself if he understands the knowledge. You have access to ash and you

can make caustic; you have access to any water and you can boil it and make a caustic of it. You have all the knowledge you need.

K: don't forget your body is a processing system and that is why we don't heal and we don't cure; we process. It means the Eskimo eats only one food but in that food he receives the calcium, the magnesium, and every other element that the body needs because the glands inside the body of the man converts materials. When it converts materials to what the body needs the excess is continuously rejected through the urine. If you go back and understand how you transfer the energy of fruit into CO₂ gans, you don't need to mix the urine in it. They are all in amino acid strength. And you can transfer the total field strength of urine into the caustic and when you wash it the water of the CO₂ is food for life for everything you need. This is a part of survival through plasma technology when there are crises with the food chain.

K: there is something very important that all of you should have understood with the papers that were submitted in Ghana conference and before that the Ghanaian scientists, Benjamin, and Atomic Science and the rest. If you understood the use of copper oxide or the use of the heavier elements as a gans, when you dirtiest waters even if they contain radiation when you mix it with the gans you produced especially copper oxide and above (higher on the periodic table) you balance the energy of the viruses and the bacteria and the water is clean enough to drink. Then if you have managed to make the gans of the amino acid of the components of the body of the man, adding that plasmatic gans in a pen to the water gives you the energy you need to survive.

K: we have to make practical, new survival kits for what man is about to go through. You have been through it and it will not touch any of us but in a way it will touch all of us one way or another. The pending separation of the continents is something temporary. In the next hundred years this will create a lot of commotion. Vibrations will kill a lot of people through whatever processes the earth goes through. There are the hurricanes, the tornadoes, the tsunamis and man on this planet has done nothing but to survive his own creator which is the planet itself. When the creator is not kind to what is created you always have the feeling of fear of all creation. And we pass that fear to our children and our environment.

K: If we understand that we can contain this and we can use this then you will understand that in time of disaster. We have seen many, many world leaders and famous people use this as Gandhi used it. They drank their own fresh urine. You don't need to do that. Because it is already rejected the body will not accept it. But when you convert it into the gans and not the matter state, then the body can take what it needs from it.

K: The beauty of this is that now that you have created the gans of the CO₂, the material gets energized from the plasmatic condition of the environment. When you drink that water it is fresh and energized. The body does this with what you call B12, Cesium, which goes through the body of the man that we inject because of the weakness and strength of absorbing energy from the large intestine and from the environment. It gets energized and has done this for thousands of years. The same thing happens in the gans plasma condition. When these people drink their own urine they don't add much to it because it is in the matter state. When you add it to the state of the gans again at the strength it absorbs the energy when you drink it. You drink the water and with the plasma of it you receive a new cycle of energy and it becomes your food.

K: so, those of you who have been looking to what you are going to do in the time of disaster, the short term solution is to create a gans to create the plasmatic liquid of the urine without adding the urine to it. Remember how you made the orange and how you made the CO₂. This is your food. It is a natural, pure, uncontaminated food and if you add it to the water you will see how it is purified water. You can pick up water more or less from anywhere and it is a guarantee that if you use copper oxide it is decontaminated from germs and bacteria. It needs a time lapse of some 20 to 30 minutes and then it is okay to use and you have pure water to drink. Then if you use the same process you used to produce the gans water to add the energy to that gans as a separate package and then drink the plasma you have the clean food in the water.

K: this is a simple way to survive in time of disaster. You can use it for your wounds, for disinfecting for any germs and for a lot of other applications. You want to create it and have it until the support is there to change the condition. Survival kits in the world of plasma have to come from the inner structure of the man and not from the physicality of the matter state. 2.01.37 minutes

R: in the chat: what a blessing for Africa to clean the Niger delta.

K: in Europe you cannot even clean up the contaminations that are so easy. If what we receive from the European organization in the contamination of the waters in Europe, I have seen this one 15 years ago or so in Russia. Africa contaminations can be cleaned up easily. Europe contaminations are beyond the imagination for cleaning up. As a lot of you know KF has set up a water decontamination unit which is very active at the moment. The requests we are receiving from government organizations in the background is alarming. If I open the books it will create mayhem in some nations in Europe. I would not drink the water that you drink in a lot of European countries. Even the fruit is contaminated. The cows are contaminated by the water contamination. They are feeding their children with highly cancerous agents.

R: there was a news article in Canada in the last few days that the hydro-dams used to create hydroelectricity are actually creating a metho-mercury compound in the flood areas. It ends up polluting the rivers under the hydroelectric dams. The local aboriginals protested about this with an area being flooded by a new dam. Now it mentions that the scientists suspect and know that all the major hydro-electric dams and projects have the same issues that are causing this metho-mercury that is 10 times more toxic than mercury and it ends up flooding the native fishing grounds and getting mercury into the entire food supply.

K: we are contaminated; it is the nature of the work we do. It is the way work and operate. It's the way man has done starting 25 years in the 1990s. I was taken to a huge lake in the Eastern Bloc by one of the top scientists of the nation. I was asked to look at it as a nuclear physicist. They actually nuclear waste from the power stations into the lake; factories dumped into the lake and the lake is now a cocktail of chemicals of radioactive materials and everything else. They eat the fish from it and drink the water and we see a lot of deformities. Water contamination has been part of what used to be the Eastern Bloc because water purification is considered only if there a need for it. There is no money for it. It is not something new. The European water contamination is horrendous. The governments have no choice and are hiding it because there is no money to do anything about it.

R: that is a problem in Canada with the Native American aboriginal communities who have very poor water supplies. The filtration systems they

have are inadequate. I am wondering in what ways the Keshe Technology to help alleviate that?

K: what is the problem?

R: often the water is not of sufficient quality to start with and has bacteria and different contaminants in it such as heavy metals.

K: we are running tests in governmental laboratories about these things. Some of the waters you buy as bottled water are worse than the water from your tap. I have the laboratory data on it.

R: they use these fancy filters for filtering the bottled water but when you use a filter like that you are holding back bacteria in the filter that has the potential to break. There are always holes that bacteria can get through and it isn't failsafe.

K: these things have been with us and it is growing bigger. We are seeing more of it and we see implication and application of this in everyday life. We see the depth of the change which technology can bring and we have no choice. We have to be part of it as it has become part of us. We have the (desire for) easiness of life and in trying to satisfy that easiness it has created huge problems for us. Go and look if you can at the pots and pans in America and the penalties they serve for the production of Teflon. There are huge penalties pending. It doesn't cover the people that have been contaminated with highly cancerous agents for years before it became public. Any pharmaceutical or industrial production has by-products. It is how they cover it that they keep from the public that is the problem. If they become open and they find a solution for it, then it saves a lot of headaches. Secrecy and intimidation has kept a lot of this from being reported.

K: there is a process we are looking at in the KF with the research groups and that is a change of course in mining. At the moment mining creates a lot of pollution and what is released and collected creates a lot of problems in Africa and other places. Plasmatic mining gives us a huge advantage. We take what we need, not necessarily from the structure of the planet, but from the atmospheric condition. We have to look at a long term plan is how, when and where the materials are produced on the upper or middle layers of the planet. And, we can understand the process of the position of the planet in the solar system that releases the creation of these materials. As all of us know our planet is continuously not only receives light as we see it from the solar system (2.12.24 minutes), but it receives huge amounts of materials. In the gravitational magnetic fields in the depth of the solar system there comes to be the strength of the matter on the earth. When they go through the

atmosphere and are touched or due to the gravitational magnetic pull of the planet, when they land or they change their gans energy on the planet, they convert to the matter or whatever could be in that position.

K: so let's say if you are going through the solar system on an annual trip there is a position in the galaxy and the other stars and planets (2.13.21 minutes) and solar system in the galaxy in one region we will find gravitational magnetic field of copper. In another region in the autumn we pass the gravitational magnetic field of zinc. (2.13.48 minutes). There are packages of these energies at the strength that in that point if the center of the earth has the gravitational field of gold or copper when it reaches here it extracts the matter of the copper in that region of the planet. None of the minerals or elements on this planet are temporary and created at the beginning.

K: We continually add and absorb millions of tons of solar dust which becomes layers of this planet every day. If it lands at the gravitational field of the desert sand it becomes the desert sand. If it lands in the Amazon and it is the strength of the vegetation it becomes that. Our planet takes from the solar system continuously what it has the gravitational magnetic field of (2.15.03 minutes). If there is a big bunch of it, it can convert. It is no different from what you did with the copper and the orange. You had the gravitational magnetic field of the orange in the water. You can do the same thing with the planet. This planet will never run out of any resources as long as it is in the orbit with the materials that are produced.

K: it is impossible to 'run out.' The hypocrisy of fossil fool that we have all found out about is nothing but fallacy. Every day, every second, every millisecond, millions and millions of gallons of oil are produced on this planet. You produce it with your CO2 systems. The interaction of this amino acid that created on the surface of the planet, on the surface of the matter state of the lands and water of the sea dictates the animals created there. It dictates what comes from the amino acid and what you call oil. Oil can never vanish because every day we produce millions of gallons of it because the amino acid attraction and interaction created by the gravitational magnetic field of the planet and the sun produces it. Can you imagine how many millions of dinosaurs died and man at the moment is extracting 85 million barrels of oil a day, has been doing this for decades and will do it for decades to come because it never finishes.

K: make your CO₂ and your CuO₂ and see how much oil you produce. If you can extract it and put it through the right process you are the 'oil man.' If you can repeat it fast enough, we will call you 'sheik.' If the oil companies understand this, they don't need to drill holes and create the mayhem they have produced in America with the native tribes. They can produce as much oil as they like. Just understand the process and give it to them. Then you will understand there is no need for doing what is being done. The beauty of it is, because they don't understand, a lot of you becoming scientists in this can tailor make your oil. Put different nano coated metals and you can make diesel, oil for lubrication, oil for cooking and you have full control because you understand the know4eldge. There is no need for drilling. Once you drill you have to ship it and you have to refine it. You have the problem with everything else with it.

K: if man knew how much oil rains on the planet every day, man would not dig it out and cause so much mayhem. We didn't know; we used it to further the intellect of the man. Now that we know and we can change course. We can't say they were wrong. It got the human being scientifically and socially where we are at this time. In this life and time we can never blame; we can build on. The time of blaming is finished. We know how to produce oil and it's a natural process. Now we can tailor make the oil we need from the atmosphere. Look, get a breakdown of today's oil. Look at the atomic structure of the fuel that you put into your car. Now you are all scientists; you know that a nano coated copper wire and zinc gives you CO₂ and the oil on the top which is connected to the copper. Look at the other side where you had the need to put zinc with iron that gave you CH₃. Find out what materials you need to position to create gravitational magnetic field of CH bond on whatever is used on your car or what you fry your fish in; you become an oil man.

K: 2.21.22 then you don't' need to damage trees and animals and destroy the planet. This transition of the knowledge is going to be a huge problem for man. A huge problem. This is going to be a task in which man has to find out how to overcome this problem because you have all the knowledge. Every (bit of) knowledge is in the hand of the man and we are the ones who have to take it to the next step. We know you have all the knowledge. It is just understanding it for using different applications so you don't become *monkey sees, monkey does*. Study it and see what the mixture is and how you need to mix it and how you need to create the protein so you have the effective one for the pan or for the engine.

K: this is what I have said. We have done all the teaching and not it is time to connect the lines and the dots in the process. You want to have a protein that you can enjoy for whatever? You don't need to kill the animal any more; you can create it directly from the atmosphere. You are doing it already so it is not strange; it is just knowing how to apply it.

R: Mario had a question about the urine. What about adding iron to get the hemoglobin with the urine, or is that no necessary?

K: why do you need to make the amino acid of the iron of it? The body takes what it needs. You can do it; there is no reason not to.

Carolina (C): could you please in another easy way for the other knowledge seekers explain how they can do this process that they are not afraid to make mistakes in the process of the urine. Could this be step by step please? A lot of knowledge seekers are really into the fields and the doctors understand, but can you explain this for the normal people working in their kitchens step by step how to do this easily?

K: first of all you need to find the toilet and then you open the door. You need to find a cup or a container and you collect the urine there. Then you make sure to you put it in a plastic back or the glass container you collected it in. You can put copper plate nano coated with the zinc plate and start making your CO₂ gans and put the urine on top of that container and not in the water. Make sure if possible that there is no air contamination because then it is a different process. Then as usual produce your CO₂ and in the production of the CO₂ because the urine is there, the amino acids are there because it comes from the body. Then you will transfer the energy of the elements that are connected to the amino acid of the man with the gans of CO₂ in the plasmatic condition.

K: You don't transfer the urine, you transfer the plasmatic condition of the magnetic gravitational field strength of whatever it is connected to the body of the man which is iron, copper, zinc, potassium and calcium and more. You need to make a mixture. The body of the man does not reject the same materials every time. So to be correct you need to repeat this with the gans structure on different days at different times. You collect the totality of what the body has done. This is all you need to do. Then you wash the gans material and transfer the plasmatic gravitational magnetic filed of the strength of the material in the CO₂ structure. Don't forget that we use the CO₂ because the connection of the information transfer comes through

carbon with the amino acid of the man. You cannot use the zinc; it has to be the CO₂. That was why you used the zinc plate.

K: then you wash the gans and that gans that is washed carries and transfers all the energy spectrum that the body has rejected which means that it needed it. Make sure you don't use the mixture when you are taking medication because part of those chemicals is transferred as well. A lot of women don't take contraceptives because they don't want to contaminate their bodies. A lot of people don't take medicine because they don't want to contaminate their bodies. When you do this it has to be a time when the body is in a state of perfection.

R: question from Leon.

K: we have a limit from facebook?

R: yes it is 4 hours. Leon asked how you prevent the pollution of the gans from the environment and store the gans in a proper way so that it doesn't absorb contaminants from the environment that pollute it.

K: you cannot stop the pollution; you have the interaction of it.

R: what is a better way of storing it, plastic versus glass containers?

K: glass containers are one of the best ways?

R: does it need to be darkened glass?

K: as the material changes to matter state it absorbs certain fields.

R: would light degrade the gans?

K: it doesn't degrade, just the energy of it. There are different ways to absorb the gans of what you need that the body has. I explained this before in the medical section. You can place your hand or arm or position yourself where the organ needs support near the proximity of the CO₂ like you did with the orange. You transfer that information into the liquid and you use it. It is the easiest way. There are different ways to apply this for different application. Those who have the damaged kidney don't have to do the whole kidney transplant to get a good kidney. If your kidney operation matches mine, I can make a gans of your kidney in the as a patch and put it on your kidney and the repair will be done. So why do you need to transplant kidneys? Intrusive operations become the history of the past and our doctors in the background understand what they need to do.

K: If you have a patient with any organ damage, if you find a matching organ of the one that is failing they just need to make a gans of it and don't

have to kill the patient to get the kidney out of it. You just allow the condition where you transfer the information in that part into a gans and then you transfer it back in. But remember your ratio of one to three or two to one. But you have to reverse the position. You will find out within hours that kidney dialysis machines are a waste of time. If you do this with an atomic reactor it is instantaneous. But it has to be big enough to cover the exact position.

K: If they let me loose in the world of medicine there will be no hospitals. Where you have immune system deficiency you have to find out where it comes from. Which immune system structure has stopped functioning? Find the matching one. When you find the faulty one, make a gans of the perfect one and put it back on the other one. Deposit it. Most of you medical doctors know what to do; we have trained you in what to do. Then you will find there is no need for bone marrow transplant. We are not finished; we add to the knowledge and the application of the knowledge.

H: may I ask a question about that?

K: put it through the medical please. I taught that before and it is part of the teaching and you can do this very efficiently. There is no need for kidney transplant or heart transplant, lung transplants or liver transplants. Now with the knowledge we have doctors can do this and there is no need for dialysis machines. The government of ___ asked me very recently if I had scientific papers for this. I told them to go ask the public because they are already using it.

K: by the way people in KF in the background are bringing all the testimonials into one place so they can be reached and downloaded. Very soon all the language testimonials will be done and we should be able to see the results all over the internet.

R: Leon asks if it is possible to create an atomic star formation using the fields to control the behavior and bringing the gans from outside into the right position to create star plasma in the gans.

K: I leave it to you; you sound very knowledgeable in nuclear atomic plasma. If you could think of it, then it means it can be done. So when you find the solution please let us know.

R: ___ answered that with intuition this is possible and Leon answers back he thinks so too and he needs some information.

K: yes, that he could think for himself for the solution.

R: Candy asks how you would make a gans of the kidney—use an animal kidney.

K: leave it to the doctors.

K: please, I repeat again, we are in the position that if we achieve what we are hoping in the next few days we will announce an additional workshop and we will explain in respect to what is being developed because it is important. It is like the blueprints and is more fundamental that can affect a lot of people's lives and we will announce it when we have it. If you understood today a lot of you should be a man of space very quickly.

K: now I will give you a seed for thought. We explained for those of you who understood how to make the gans of kidney or whatever to transfer the information to the one that needs to be adjusted. Understanding this knowledge how can we change the emotion of the man that the killing instinct in the structure of the man changes. Can we find this through a man of peace? Could we make a gans op his emotion that we could feed the rest? Something very interesting is coming up and we watch and learn.

K: In the past few hours we have seen one of the world nations choose a leader and instantaneously part of the nation does not accept who was elected. The others who achieved their dream do not have the dream of the ones who do not accept the election. How do we make peace the dream? How do we make unity the dream of every man and have this become a reality? It can be done in a gans but the man has to be ready to accept it. If it is not within the brain or the soul of the man, it will not fly with the man. As we said we will wait and we see. We are not preachers, we are teachers and we teach the science of the universe. With it is the ethos of the universe but man has to learn how to mix the state of the planet with universe so that man can enter the universal community. Thank you very much for today.

R: that is the 145th Knowledge Seekers' Workshop, Nov 10, 2016.
