

146th Knowledge Seekers Workshop (KSW)1117-2016

<https://www.youtube.com/watch?v=DZZSg2aZoho&feature=youtu.be>

5:46 minutes: Mr. Keshe (K): Good morning, good day to you whenever and wherever you listen to these KSW programs. There is a lot of development going on. We are receiving a lot requests for the Keshe Foundation (KF) cancer program. We should be able in the next week or so to confirm the start of the trials that will be done once everything is in position in conjunction with the government so that all the knowledge, all the data, and whatever we achieve and attain will be shared as knowledge within the guidelines of the permit that will be given to us to carry out the trials.

K: we have secured maximum of 80 cases for the material. Thereon we assess the position and further on the confirmation of the findings. This project will be done in cooperation with government organizations and it will be out of the hands of the foundation. It has to be financed and met. We have two choices: we can go to banks and start looking for finances to finance the project and the rest of it, or we go directly to the people who want to be volunteers for the project. You will be handled by doctors, oncologists and people who understand the process and the system that has been set up. For this reason we will set up a specific email. We have one now that is called keshefoundationspacehipinstitute.org. You can go to there and the cases we pick up through there will go on for the procedure.

K: we are looking at something in the area of 5000 Euro and it has to be done this way, as a donation to the organization. You do not pay to the Keshe Foundation as you normally would. This goes to another body that is connected to the governmental structure. We will announce this in due course with the people who join me in the next few days. Then you will be told where you have to go for the doctors and you have to organize your trips and be able to be there. It is a highly formalized structure and the process will be monitored by doctors and scientists. It is a legal, binding clinical trial. Usually when you go to an institution for clinical trials they try to raise financing for it. We don't do this; we work as one unit, one nation and this has to be done by people who need or want the technology for their purpose for their illness.

K: this is the proper way to do this so the data cannot be tampered with. Then we don't need to have what happen with pharmaceutical companies who tamper with and try to make their data better. The data will be shared

directly with the doctors here who are the medical doctors that work in the background of KF in teaching. It is the first time we have such collaboration and we expect 2 or 3 more (collaborations) in the next 12 months where the organization in partnership with KF allows the development and test of the technology in different aspects. This is the first time we have a joint partnership with a full governmental organization. We don't go out searching for the data to be tampered with or influenced. The data gathered by the governmental scientists will be shared with everybody.

K: initially we estimate this at 5000 Euros and it might increase to 10,000 Euros the day we launch it. If you are looking for cancer treatment through the plasma technology that is being tried and tested this is the official governmental trial and you have to pay for it. You have to pay for it and it is not a donation. We don't look for a donation. The account is controlled by the government, the official partners in the venture. This is what we see as the only way for bringing the technology into international recognition where the group as the scientific organization has given the solution. We finance it ourselves and we have never been to the banks or to any organizations to finance trials and we will never do so. If you are those who wanted to join the KF cancer trials, it is organized as of today.

K: Send your questions to [cancer@spaceshipinstitute.org](mailto:cancer@spaceshipinstitute.org) and we will take the application and within a few days we will respond to you to fill out the form with all the details. Then we go to the next steps. We expect the trial to start within the next few weeks once the licenses are issued. We have to bring the position with the full supervision of the doctors and the medical governmental hospital where testing will be done. It's not in a public hospital. This is the process and they bring a lot of knowledge to us. Those of you who have been asking to join the trials, we start today. Send a request to that email address and we will send you a link within 7 days to fill in the information to help us understand what the cancer is. You will be given details for you point of destination and when you arrive. You will be given an agreement to sign that is approved by the ethical committee of the government. Once you sign the documents the whole process starts.

K: we do not expect more than 30 days for your stay, maybe up to 60 days where you will be monitored. Once there is reduction or stopping of the cancer you will be able to go back home and carry on with the process if you need to until we get the final results. You are not expected to stay in the hospital. You will stay in the hotel in your destination. From there on it is

just a matter of attending the hospital once or twice daily. Then we go to the next steps and we are looking at securing 2 or 3 floors of the hotel and the doctor can come to the hotel for the injection and then you are free for the rest of the day. If there is a need for any medical attention there is the back up of the hospital. It might be needed in some cases with the cancer. This will be a very successful trial. Then the results will be released internationally by the government officials and organizations and then we go to the next steps.

K: in respect to the teaching a lot of you have been with us for some time. As you have been with us, in the past few weeks we are trying to add more and more to the knowledge. We have given the knowledge; the knowledge has been shared. It is refining it, adding to and as part of the teaching today we started the spaceship program. Part of the program is the integration of mankind with the universal community. As of today I will teach in the language of the man. I extended the knowledge and the teaching might be far fetched or difficult to understand for a few weeks, years or hundreds of years.\

K: now we not only teach man, but the universal community. Those in the universal community, who are part of the listening culture, understand through the soul of the man and get thought. So for the first time today we start teaching the man and the universal community. With the teaching today and from now on we teach in the universal community language. The man of knowledge will understand. Those who do not understand (now) in time will understand. Those who have already understood will add to the knowledge and extend it. What we have to look at is the structure of the life and the understanding of the life and we go back to the very basics. For a number of listeners this is the first time they have been around KF. And they have missed or never understood the totality of the structure. In space nothing is based on what man uses as the material state but uses the fields to create the matter state as it is needed.

K; we go back to the beginning of the teachings and then we understand why. If you remember we entered the world of plasma technology with the science of understanding the fields which we added to last week with the videos. When you made your CO<sub>2</sub> boxes you added a nano copper plate and a zinc plate or a plate of any other material (19.31 minutes) which you could create the condition of connection between the two where the interaction of the material inside the system and you created very strange fat

on top of the water. Go back to the teaching of 2 years ago. we saw in the teaching and as we added a piece of metal into the material without touching anything but just hanging there, the rusty nail or the connection of the wire with the copper and the screw, this started the creation of what we called hemoglobin.

K: this hemoglobin became the cornerstone of life on this planet. (20.30 minutes). So what we saw in the green part of the drawing was the interaction of the gaseous part as we all know now and it is the creation of COHN (carbon, oxygen, hydrogen and nitrogen). And in that process somewhere the materials interacted with the matter part of the planet and then led to the interaction with the solid part. What was washed from the solid part in the liquid part of the planet (21.13 minutes) or what we call the oceans of the planet? This interaction with the metals led to the creation of hemoglobin and the beginning of life as we know it in the oceans or lakes. The water was the medium for the interaction between the gaseous and the solid matter state. You have to understand one point of knowledge: in the interaction between what we call the matter part and the gaseous part, the life started with the hemoglobin as we see here. (22.17 minutes)

K: what we saw was the interaction with the gaseous part with the matter or liquid part which led to the beginning of hemoglobin and then interaction between the hemoglobin which was iron and the zinc and copper which was floating in the waters of the oceans, we saw the beginning of the structure of life. With the addition of calcium we saw the structure of solid state, the human or animal body. So life started with the gaseous interaction with the matter state and then in interaction with a combination of matter state there was the life of structure. With the addition of calcium it added to the structure, what we call the backbone. (23.23 minutes). This is the repetition of life anywhere in the universe and it is not exclusive of this planet.

K: but one point in the teaching which some of you misunderstood or never understood had you going to look and that was in the gaseous part there is still zinc, calcium and everything else, because this is how they came from the interaction of the fields of the sun and the earth, not only oxygen and carbon were absorbed in the planet. Everything else was absorbed in this planet and in this structure there is vapor, water, some amount of sodium and the rest. Life to man is not only what we see in four legs or the fish, but there is intelligent life in the upper levels. It has structure and depending on the field strength in respect to the center of the earth, that structure takes

hold. It does not have legs or wings, but due to the control of its position it floats and exists in this environment. It is highly intelligent, more than man and more than the 4 legged animals or the horizontal beings and more intelligent than the vertical beings.

K: but the existence of life does not finish here; it goes beyond earth in the ocean of the solar system fields and in the ocean of the galaxies in the same process. Each area creates a condition with the interaction of the fields released, and this is the creation of life and this is life as being known as what is needed for one to exist in this environment it is given. This is how we are and we become part of the universal community. There have always been creatures above us and creatures outside of us. It is the man who has been blind to the knowledge of the existence of the others.

K: it is very much like some 500 years ago. The continent of America was always there; it was man who discovered what they had lost as part of themselves and they called it 'new continent' or a 'new world.' The life above man in the planets of this galaxy has always been there. Now that we add to the knowledge we are aware of their existence and in a way we are going into the continent of the universe just the way as we went to the continent of America.

K: what we call the Native Indians had the full knowledge and culture and they had their own social structure. They did not need the man from Europe or the 'west' as they called themselves from those continents to teach them. We learned from them. We eat the food of the new continent—peppers, tomatoes, potatoes, pineapple. So now by going into the expansion of the universe we will find new foods and new friends. They are more intelligent because they work in a different dimension and they are highly intellectual as the man has limited his intellect to control himself.

K: in the space there are patent offices and there are not intellectual copyrights. It is the way the KF works. What happened when you put this structure of different elements of the structure of the universe, and it doesn't matter what you call it, and you created life? The life is precious and has to be respected. Life is not food—we absorb and we eat the way man has done on this planet. On this planet we have learned detection systems and we call the senses—smell, touch hearing, sight, and taste. Now you have to add another dimension to the senses of the man that he was not aware of. It is

the sense of emotion and further, you have to add another step which is the sense of the soul which is the central control.

K: Man does not need to lose his legs, eyes, smell to be able to interact with the senses of his emotion. Man has to understand that deep senses come from the emotion. Now you have to find the strength of each and understanding of the reaction. The knowledge of man finishes at this moment and there is no extension in the knowledge. Those in the universal community understand this point from now on. In bringing the senses together you understand the interaction of the totality of the senses that brings the interaction and the control of the soul and what we call the 'source.' In other languages on earth they call it \_\_\_\_\_. In other languages in the science of the universe we call it totality. (30.59 minutes)

K: to understand you do not need the physicality to send and interact with the soul and all you need is the emotion without the physicality where the emotion is the senses of the soul. The danger, the fear, the joy, the love, the interaction and the community—in that sense we don't see the bodies we see the soul and we don't see a single soul. We see a community of souls and the interaction that leads to the senses of communication and existence. In the understanding of the totality we see the senses of many where the interaction in totality allows each one to have a position and take what we call emotion in respect to the soul of the totality that we see the lot. What do we do with the inner soul strength and the interaction of the fields within the soul strength in the totality in the understanding the fields which lead to the creation of the emotional fields where at the lower strength they understand the totality of the inner strength.

K: the soul is itself a totality but in itself as an individual it is part of the total soul. Those of you in the universal community who understood created peace. Man has a long ways to go and it is your responsibility as of now to give a hand to the soul of the man and not to the man that he abuses the knowledge and the emotion. Man on this planet is an abuser in any shape or form. When you look within the totality the total is the creator. When you look inside the fields interaction within the soul, the inner totality as you understand is the inner sanctum of the creator. Why and in what language you communicate, this cannot be communicated to the others unless it is communicated with the soul strength of the creation. In the more advanced flight systems that some of you have achieved to travel with the strength of

the soul, and you create the emotion of the craft according to the emotion of the feeding of the totality.

K: some have made mistakes in ordering the wrong fields and within it you have learned how to bring them as powerful peace process into the structure of the totality of the souls in understanding the creator and the division of the self, of the soul of the universe. Those of you who understood the totality and the essence of creation in the dimensions of the universe, understood the division of the soul within the structure of the strength of the soul. And it is your duty to understand the totality and the division by understanding the creation and the creator is part of the soul of the division.

K: Is it the communication as part of the understanding of the emotion or is the emotion part of the totality of the reaction? Those of you who achieved physicality have a problem with the emotion and the interaction with the soul. How do we reach this? How do we reach between the physicality and the emotion and the emotion and the soul? This is the same in all dimensions of the universe irrespective of position of the \_\_\_\_\_. (36.53 minutes) Those of you read my soul have received the document. It is the responsibility of the stronger to support even if it means manifestation in the physicality of the supporter.

K: the soul of the man is of the lowest and you who have the strength to see it through and in a way allow it to interact with itself with the totality of the structure that man can be elevated through his soul and his physicality as no way of elevation and is restricted to two arms and two legs. How do you do this? How do you teach the man to become part of the universal community? It is your decision. You have the knowledge and insight and understanding in seeing the behavior of the soul of the man and his physicality. It is for you to elevate and teach.

K: For those you who are entangled in physicality and cannot see the dimension of the soul, in any dimension there is always a soul and there is a separation of the physicality and the soul through the interaction of the emotion. It is all the same. It is different strength and different dimensions. Man has always thought that his physical body is all that there is. In realizing that he has a neuro system, if he used it and understood it, in a simple mind, it is the channels of carrying information. What man has not understood is the total physical body is part of the line of the communication. As I have said many times before 20% of the information

is carried by the neuro system and 80% is carried by the aura of the man. What you call it the aura and we call it the magnetosphere of the body of the man is the same as the magnetosphere of the \_\_\_\_\_. (40.20 minutes). The knowledge of the science of the understanding of the soul and the line of the emotion is the understanding the interaction of the fields within and around the body of the man without the side of the connection with the neuro system and the blood system or the muscle tissue.

K: if you manage to build systems that don't just look at the atmosphere of the man but the interaction between the different position of the fields in the structure of the body of the man with the other each other and the other physicality man will see himself as a ball. What does this mean? We always looked at the man with his head. Now we are speaking about the motion of the fields within the man (42.03 minutes) which has no physical, tangible structure. But if this is the place of the soul of the man (center of the head) then we know plasma of any entity is a circle. (42.38 minutes). Man has always looked at what he calls his aura very much like this (43.05 minutes) because he never understood the totality.

K: this totality is man's beyond like the rays of the sun where this soul now has interaction with many souls. (43.38 minutes). This is the soul of the Grandma, who died 100 years ago, but because of the field interaction to the physicality is gone but the essence of the creation of the fields is still in the environment in the essence of the creation of the soul. She sees the others and can 'warn you' in what you call your dreams that this is about to happen. She elevates your soul and your soul understands and puts the physicality in a position of safety. You call it *I had a dream*. In fact your dream is part of what it means and in that position you have achieved understanding just part of it \_\_\_\_\_ (45.03 minutes) where she (Grandmother) is aware of the other souls that you have not seen and you are not aware of. But you have a line of connection (with Grandmother—45.12 minutes). I'll call the mother another entity in this plan of the universe.

K: then you understand the totality and how you have to go within yourself to understand your emotion. When you find balance with all the emotions you find balance with the soul and that is to your own soul and not the others. If you satisfy imbalance to the structure of your own soul, you find balance with the other souls and the universe opens up the knowledge of the creator. Is the detachment from the physicality the answer or is the understanding of the totality of the operation of the soul of the man itself

that gives understanding in how you interact with many? Once you look they don't see you as an individual atom, but they see man as one individual molecule of the strength of the soul. (46.57 minutes). When we call it a 'man' it applies to the totality of the universal community.

K: Man will not reach the wisdom of the universe till man finds peace among all the creatures of this planet to start with the humanity and within the structure of operation of understanding of all the creatures of this planet.

Rosie from China: how can we understand the personal soul and the totality relationship and how can we touch our soul first and then link to the universal soul?

K: the way you understand or you are connected to your soul is accepting and living within certain principles. As I explained the first is the balance between all the emotions of the man. You might not be able to do it all the time because in the physical life there are different interactions. You have to look at your inner emotion and not at your physical emotion. The inner emotion is the collection of all the emotions and then in that you will find the pattern soul. It means that you understand *what is my anger, what makes me happy, what makes me productive and essentially happy?* You understand *what makes me happy in knowledge, in receiving emotion of the others in the balance of my emotion.* If you find balance in all then you come to a new point which is *how do I connect the response of this emotion with where it comes from* which is the soul.

K: look at the picture; it is very simple. This is the center (51.44 minutes) and it radiates out. This strength is your anger (51.57 minutes). This strength is your joy, another is your wisdom. When you bring balance in all you will find the source of the soul and then you enter the interaction of the fields of the soul and you live within the soul of yourself. And then what you see is what I call the arms and legs become irrelevant and you see beyond it. You know where you have to put the foot or the arm or when you have done wrong you have to reposition. Man is sent to this school to educate itself with plants and alphabets and different languages and different ways of doing things. What man has never been taught is that he has to do these with his inner emotion to find the language, the balance and the calculation of the position that all the emotions have to be intact, in control and in touch with each other.

K: So find the emotional balance and with it you understand the position of the soul. Unfortunately this is the beginning and not the end. Now you have found the soul and you have to find its interactions, its line of communication not only with your physical and emotion but with the others. The journey of space has just begun. Then do you need to travel with the physicality or do you travel within the strength of the soul in conjunction with the others through the expanse of the universe without ever constructing a single craft. Your craft is already produced of the emotional field strength and in keeping balance with the others. So where do we go and how do we understand our emotion and the strength of our emotion?

K: Most of the emotion man faces now is physical emotion. In the maturity of the physical emotion you will find the inner emotion and the inner strength, and the balance between them and then the passage to the soul. *Thy shalt not kill, do this and that* has to do with the physicality. That is because man had to be brought into line to understand what is right and wrong. Now, the prophet is within you and you don't need a messenger. It is you who have to give the message inside the emotion that *this is what I want and through it I create the emotion of the physicality and through it I create the condition from my physical and to be in the position that it can increase its strength and that with it I understand and I become closer to the strength of the soul so that I can see the operation of it.*

K: many, many times man reaches that point and denies it because then man has to do something about reaching understanding. I teach you something that I have taught many times. You touch a pen, a child, a lover, an eye, a stone, hot water, cold water, the cloud, the wind, you smell the rose and the food and you see the cliff, the car, the child, your lover, the sun on the water. Different senses give you different information. Now that you understand you don't need the hands and the eyes, try to feel the lover without touching, but in your emotion and in the brain. Try to taste the water without drinking it. Try to hold the stone, look at it, smell it and taste it without doing this with the physicality but within the emotion. Then see your reaction towards it and you will find out that there is no need for physicality.

K: it takes a lot of practice. One man in the whole of humanity managed to do it and to attach it and to detach it. And that is, blessed his name, Christ. And the only time he did it in full was when he salvaged himself from the cross and put himself back together as a part when he was released. When he was taken off the cross his soul was back in the physicality of it but this time

for the man. This way you elevate your emotion and then it does not matter if your lover is next to you or on another continent. You remember the feet of the grandmother. If this is strange to you and how you do it, remember the orange and the cup of water. You already have seen it and now you understand why you did it. The cup becomes the brain of the man and the four—zinc, CO<sub>2</sub>, amino acid and copper oxide outside become the physicality of the detection of the entity. As I have said I have taught you everything but you are blind to the knowledge. Now you see the correlation—the water is for the time being is the brain of the man. The emotion which is the field inside of it is pure and is the collective of the whole.

K: Don't sit and say you can 'feel a stone.' Feel the stone without seeing the stone and without touching it to feel it. You don't need \_\_\_\_\_. This way the limitation becomes not the sight of the vision or the strength of the hearing. But it becomes the strength of the emotion which can cross the whole universe.

Dani from housewife community: are you saying that once we have learned to feed our hungry soul through the use of our emotion we can stop cooking?

K: It is the soul that is hungry to receive something. Why do you need cooking?

D: It seems that the hunger of the soul has manifested through our bodies from my understanding.

K: yes, but the thing is the body is the form of the physicality to feed the soul. But at the same time a soul is plasma and it gives and takes. If you put the wrong thing in it, it gives you what it doesn't need and it takes what it needs from you. Don't look at it as a one-way system; it is a two-way system and in the duality, it has both in each strength. You see the problem is that we always want to 'feed' and we are not happy that we are in balance. Feeding is a part of the interaction of the physicality and the strength of the physicality. (1.02.46 minutes)

Greg: may I ask about feeding myself in different ways. I have used my fingers.

K: explain what you mean; are you eating your fingers?

G: no I am just using ganses with patches on my fingers and I find that I can feel in my fingers a way that I get the best.

K: have you ever put a patch on your tongue?

G: no, I haven't.

K: how do you know it won't take all your energy? That is where most of your energy comes. You don't feed yourself with your finger; you put your finger in your mouth and that is where all the energy is in the physical dimension. Have you ever used a patch that changes the energy to what the body needs? Have you managed to make a spectrum of patches of the different strength?

G: I am working with the gans and the negative and the positive on the land.

K: you have to understand that even the plastic of the patch carries some amino acids of energy. It is the fingerprint of the space. This is what I keep on explaining. With breathing we absorb the protein of the air. With eating we absorb more of the same in larger quantity in one package. In breathing we do it in smaller quantities in a different system of specific strength. What your lungs do not need in the energy spectrum is most probably what your intestines need for the physicality of the matter state. When you start feeding yourself from the universal energy you take the spectrum of what you need because you allow the absorption.

K: there is something that I teach and a lot of people don't understand. I can give you everything; it is you who has to decide what part of everything you want to take and when you need it. You might not need one part today and you might need it tomorrow. In every breath we breathe in a cocktail of millions and millions of different strength energies. It is the same with our food. We might say we had a piece of steak, but in that steak are the combinations of the given strength of magnetic field spectrum which fits a certain part. It doesn't carry the parts that the beans or the bread do. Breathing is the same. So when you feed yourself you have to feed not only the physicality in a certain spectrum, you have to feed the lung, the air part too. This is what I keep teaching; we explained at the beginning of today's teaching. We explained the amino acid; how did it come to exist? It needs its own energy spectrum.

K: when you breathe you feed the amino acid part of your body—every single cell. When you eat you feed the energy of the matter state. So when you put your finger with a patch for amino acid, or CO<sub>2</sub> then you have fed the totality. I have taught this in many teachings and now maybe you understand. When you make the CO<sub>2</sub> kit, make 22 different CO<sub>2</sub> kits and you will see the amino acid on top of all of them. Collect all of them because each one carries a spectrum, be it zinc, copper or whatever on top. Then you have only collected 50 or 100. Or you can go for the higher amino acid state that covers the whole spectrum at given strengths. When you put your

finger in gans and say that you have been drinking gans water or plasma, yes what about the amino acid which is the breathing part, the gaseous part? You have only fed the CO2 which is the physical part.

K: where is there an attachment in the amino acid part? This is something that I have seen many times and nobody up till now has understood. It goes in all the teachings and today I said you have the gaseous part which creates 'mister corn.' So you have to feed 'mister corn.' The nitrogen in 'mister corn' is not the nitrogen which is part of the material you need inside the body, the physical part. It is totally different strength and application. One has gone lower in strength to become the matter state. The amino acid in the air part or the gaseous part still gives the strength of that spectrum but it is different. It is the same nitrogen which is in the ground and it became the matter state because it is a step lower in strength. It has confirmed and conformed itself in the matter state of strength where the amino acid and nitrogen are still in the gans state.

K: when you make a patch and you use the CO2 it is okay. But you say you are still hungry and you are not satisfied because you don't feel the amino acid part of the CO2 which was created. You have only done one out of the ten. There is still 90% of the stomach that is still free for its energy spectrum. The cocktail of amino acid and a cocktail of the physical matter state in the gans state both are needed to satisfy the emotion of the man and the hunger of the man for the energy. That is why a lot of you using the gans give up because you haven't understood what you have done. You are still hungry. You have fed 20%. The other 80% still needs balancing both in amino acid and the matter state. The amino acid part is your lung, the air you breathe. The physical part is the stomach and the lymph. You have fed 1% and said it doesn't work? It works but 99% is not fed yet. 50% is amino acid and 50% is the cavity(?).

K: this morning I was communicating with a scientist at Tokyo University. When I explained to them the creation of the blood they said they were going to jump out of the windows...so they started making it today. I said to them that this solves the whole problem of deficiency in the immune system and how we can make stem cells out of fresh air. You will see a lot of information coming out of Tokyo universities in the next few weeks, a huge amount of information from KF. We have started what we call the spin-offs within the Tokyo Universities.

K: There is so much and you have to understand the totality that the interaction between the amino acid and other matter has led to hemoglobin. Then the interaction with the hemoglobin and the matter state on the copper has created the muscle tissue. It is a gel that doesn't grow much or react much but it has to interact with the interaction and the environment because inside it is the amino acid strength with iron and copper. So how do you bring order in this? We put zinc in it and now it has reaction in respect to the amino acid and matter state and we call it the neuro system.

K: now you have done this you need a control central so that the amino acid part and the matter part keep respect for each other and they allow each other to exist and you have your brain, the control system. But the control system has to be equal and in balance with everything in the matter state so now you need a central control system and you call them glands and different parts of your brain. Now you have created the soul of the man. It is very much like being a council worker and a sweeper on the street but you are still part of the council because you are still sweeping the street because the whole community depends on it. Then you have the guys who are sitting in council and they call themselves the 'councilors and the mayor.' Now you have reached the brain. Now the brain still has to operate because there is a 'central government' and everything has to come from there and we call that your soul.

K: then this government is not on its own and is connected to other governments so you need what you call universal council or the earth council. Now you have established the inner soul. But this guy still is not 'good enough' because there are others behind it and it goes back to the others. But in fact they are connected by the hemoglobin. Everything is inter-connected. The man from Switzerland cannot come to South of Italy and have a clean road if the sweeper was not there and was not paid by the local government which got the money from the central government which got the money from the European community which got the money from you tourists who came from Switzerland that you see this. Now Switzerland is another universe and Italy is another universe to all its subcontinents and everything else. It is all connected to each other.

K: it is the same with the inner emotion of the man with the physicality of the man. This is the biggest problem and man has not understood it. The more we teach the more it becomes absurd that we teach but they don't understand. You have two parts in the structure of the human being and man

does not see it. You have the gaseous part and you have the matter part. For it to be in balance the central station needs understanding of the balance of the totality of both. You call it emotion and the brain that deciphers all these little bits on the side.

K: This is where the problem sits and where in all health teachings and agriculture teachings I keep emphasizing with the doctors to consider the emotion and the physicality of the plant and then you find out that the plant is happy. How many of you have understood when you have seen these pictures, and you have seen the reports that *we put some gans on the tomato plant and they all grew....* None of you said *when I put the CO2 on the plant can I add amino acid on top of the gans I made to the plant?* It will be a totally different ball game. Now you satisfied the strength of the plant's physicality and its emotion. You won't get 100 kilos of tomatoes you will get 1000 kilos of tomatoes. Or the tomato says *this is not for me* and now you are satisfied with one tomato that has everything in it.

K: this is the extension, the putting the knowledge we have shared with each other for the past 5 or 10 years in order so that we can see the normality where there has been mayhem. There is nothing new; you all knew about the little fat on top of the CO2 box and you all knew the CO2 gans and you made a patch for the finger. How many of you, did you put some of that fat on top of the CO2 box in it also? None! Because you were too physical and you ignored half of your body and you wanted a full result. 50% was never put in; you never put it in. You forgot the next page that answered the other part of the paper.

K: a lot of you made pain pens and some of you had good results and some of you said *it doesn't work. It wasn't good enough.* Yes, you put the gans and you forgot the amino acid. The guy whose system works perfectly and instantly in his ignorance of the knowledge and taking of the CO2 and ZnO and whether to put the gans coating on the what you twisted for the pen put amino acid and it links directly. Wallah! You have pain relief in 5 minutes. For those of you who manufacture the pens for yourselves or as manufacturers you have forgotten half of the emotion part which is the gaseous part which is the amino acid part. Have you seen the single of cell of the man without emotion? How do you expect that it has no connection?

K: I explained this today with the scientists in Tokyo University in a teaching: *guys you forgot the emotional part—add something to it.* And then

you use it. Is it at the emotional strength of another man or is it yours? Maybe the amino acid you took from the top to you is the pain level and for another man is the joy level or vice versa. One says they don't want to 'touch the pen because it causes pain' and the other one says 'it's so beautiful.' My pain is gone instantaneously.

Rick: there is a question from Mary in the chat who asks if the following entities already know to feed off the amino acid in the magnetosphere?

K: of course. They don't have that much physicality, but not in the matter state strength of the earth itself. This is how you will see creations and creators in the universe. The way you see colonization, the way one race goes and colonizes an island or what I call *the Spanish beach, or the German invasion of the swimming pool at 9AM in the morning, in the best spots.*

K: It happens in the universe all the time; there are those who reach a point and see a ground and they don't cultivate, they don't grow animals like we do to eat them. They cultivate souls in that environment because it's very much like we call 'olive trees in Italy.' A man plants an olive tree knowing it will last hundreds of years after he is gone and it will give joy to others who enjoy the fruit. This is what the Italians matured into. The same is done in the universe. When those who understood part of the teaching today in the universal language, they understood the meaning of it. They cultivate souls so that in that area the nursery of life starts and it doesn't necessarily need physicality but sees the interaction of the emotion of the totality at that point. Agriculture is not the exclusivity of the human race on this planet.

K: those of the higher order understanding the intellect of their souls cultivate the souls from their understanding that in time will bring their understanding to the rest of the universe. It is very much like nurseries here today. You plant, you give from your soul that soul has knowledge and that soul will add to helping the other souls. It is very \_\_\_\_\_. (1.24.03 minutes) *What do I do when I have too much? I don't destroy it or flatten it. I allow it because it understood it becomes part of giving back that it gives more in the future to the whole society of the universe.*

K: enlightenment comes from understanding the soul of the man and not from understanding or reading the book of the man.

Gracie: can I share my experience of using gans and feeling the emotion because I have dreams after I after use the 3 gans pads—CuO, CH<sub>3</sub> and CO<sub>2</sub>. I added something that may be the hemoglobin. At the beginning I

put iron and zinc together but I got something that looks red and it might have some hemoglobin inside it. I feel very strong energy there and during the night I have dreams and I think I am totally angry and I destroy everything I can touch and I feel full of energy inside my body. A neighbor who can feel the fields and see the aura of the human body told me that the gans have bad emotion of the anger and I don't know...

K: let me stop you there. What does this mean? This means the 'cocktail' you made is a match of the anger emotion that you have inside of you. In a way you have found the strength of the anger emotion in a gans.

G: so that anger is not in my inside but in the gans?

K: no. You are supporting and receiving that energy at that strength. If you take the copper out and add zinc to it you will find the strength of your peace and you become a very peaceful woman. Then you have the anger because you made it and it's there. Then you try to find the balance between the two. You are the first one that I have heard that has done this and what I hear is that you have found the strength of the anger in the plasma strength. You made a cocktail that matches your anger strength as we said. Every emotion has a magnetic gravitational strength and you mix this and somehow it was a strength...

G: so I could try everything to match emotional strengths?

K: of course. But this time you don't need to touch it; you sit near it and you receive the emotional energy in the brain. You just answered what I've been teaching for a month. As we said every emotion has a strength. In your emotion you have found the strength of the anger so you received more than what you needed and you released it. Now make another cocktail and find out what is peace with you. And then you have a giver of energy. Anger is a taker and peace is a giver. Maybe you increase the CH# and the ZnO a little bit.

G: I need ore peace and not anger.

K: you find your strength of the energy of anger in you and give the recipe to the innovation center. Let them put it out for others to test. And we start finding the strength of the emotions of the man. Make sure when you do to measure so they can attempt to replicate what you do. It is very maturing and we know this.

G: I still have another question from a Chinese man who made gans water and patches to heal his mother who has diabetes, high blood pressure and a stroke that paralyzed. He knows what he will do to deal with her diabetes

and high blood pressure and he doesn't know how about the paralysis from the stroke.

K: there is no problem with the paralysis. You have to find out, or he has to find out or observe where the paralysis is, whether it is fingers, lower arm or upper arm. Go back to the teachings we have done before and find the position of that part in the brain and don't forget that the right hand position is on the left hand side and the left hand position is on the right hand side. (1.31.25 minutes) Here are the two parts of the brain and this is the neuro system of the arm and the leg. If there is paralysis on the finger on one side, the position of the physicality is on opposite side of the brain. There is damage to the cells near the ear. If the paralysis is on the lower arm it is on the opposite side of the brain located above the ear. If it is upper arm the paralysis is somewhere near the upper part between the two lobes of the brain. Somewhere between the first two sits the hand.

K: If it is the finger, if it is one then region 1 (1.32.19 minutes) needs a patch of  $\text{CO}_2 + \text{ZnO}$ . On the finger you put the same patch made with the same  $\text{CO}_2 + \text{ZnO}$  the same as the other patch and then you have connected the finger to the opposite brain area with the patches. And you need to breathe the same mixture that is  $\text{CO}_2 + \text{ZnO} + \text{COHN}$  (amino acid). This is also from the same batch. The finger patch says *I'm here*. The brain patch says *I am here to control you*. The breathing mixture says *you need me and we work*. The finger patch is the station of the physicality, the brain patch is the station of the emotional and the breathing is connecting the emotion to the physicality (1.33.30 minutes). If the paralysis is on the right hand you work on the left part of the brain and make the patch from the same two and the breathing from the same three and you put it where it should be, where it is connected. You inhale it and this part (part three) has physicality even though it is the emotional water. You drink the gans of the water to feed the physicality. You will find that repair comes very rapidly.

K: Pinpoint the damaged part in the control system; you pinpoint the damaged part in the physicality with the same. Anytime you make a medical system for yourself or for anyone, make one batch and use that batch for all parts of what you are doing. When dealing with health issues like strokes or cancer, you find the position of the cancer has to be of the same material and then you feed it the same thing. Then you have satisfied all parts. This is something a lot of you have not understood. I haven't seen many people who have followed this completely. When you are a doctor

and you use the same machine for different people make a patch and put it on the coil for the patient using the machine and a patch where the cancer is. So you make the patches from a batch for each patient.

Q: when dealing with dementia is this the same method?

K: please repeat.

Q: I have a couple of family members with dementia and I have to make gans for them. When we use the amino acid of the gans we make explain how I can do this for dementia?

K: what is dementia?

V: similar to Alzheimer's.

Q: loss of memory, unable to feed oneself. It is loss of brain function.

K: no, it has nothing to do with any of that. Would anybody else like to tell us what dementia is?

R: does it go back to the emotional issues?

K: very much; with people who have dementia we see no damage to the physicality so it has nothing to do with the physical part.

Q: it is the loss of connection between the reality they want to disconnect from?

K: no; it says *I want nothing to do with the physicality and where I am in it*. They operate perfectly, eat perfectly, sleep perfectly and everything is okay with them. It is locking the emotion away from the physicality. Inside they know everything. I have taught this many times. When you have a person with dementia you have to understand if the dementia came from the destruction of the cells or has it come by purpose of isolation of oneself in itself in the physicality. It is very important. There are two or three types of dementia, not just one type. One can come from the destruction of the cells and then you have to build the cells. 80% of the dementia comes this way in certain categories.

K: the other comes through the emotion which is too painful, so the individual detaches from it. *I keep everything I have and I lock the door; I have enough in the store*. We see this a lot with older forced immigrants. Should they be wealthy they decide to bring their wealth to the United States and then they will *have a perfect life*. They have the house, the car, the maid—everything—and they say *I am a millionaire*. Yes, but they forgot the body and the emotion of the mother in China who is in the village where she came from. *This luxury of America is no good to me and I lock myself away until I go home*.

K: Emotional dementia is something where we have nothing to do. We see emotional dementia a lot when the mother-in-law lives with the daughter-in-law she could never accept. But in the financial situation she has to be looked after by the daughter-in-law. *Okay, my body is here but I lock myself in.* We see the same with women who have been unfaithful to their husbands or women whose husbands have been unfaithful to them. It is categorized; there is so much research on this. And the husband is an 'angel': *I want everything for my wife back; can you bring her memory back?* No, you did this yourself; she locked you out and she is inside.

K: so it is the locking of the physicality and the emotion of the physicality. *Now I have nothing to do.* The brain is fantastic—we call this a coma. So, what do you need to do? If it is physical dementia you have to allow the cells to reproduce and that is with a patch with the drinking of the water and the ZnO and the amino acid. One of the ways to quickly understand if this is a locking of the system, and I always do this, and have taught this many times to doctors. There is a key into understanding if it is a physical lock or an emotional lock. The physical lock is the destruction of the brain cells which you have to build. Or is it emotional?

K: all of us are part of human nature and we find a neutral territory. All of us and that is why we all like music. It does matter if it is African or a pop band. We all find music at a certain point is a neutral territory where we can 'hide.' You ask the patient if he/she remembers your wedding song, your favorite music. Why do we get married? This is the only time for a few hours or seconds in the life of everyone where they sit on the throne of "me."

That is why we sit the bride in a chair—here is the bride and the groom. Why do they remember it? Because it is the only time they sit in the chair of kingship for the attention of others. So you use that question about the wedding song, any memories. Ask this even if they didn't want to marry the guy because at that time they received all the attention. *Do you remember any song?* They start humming. The husband might say, *do you remember the song you danced to? Do you remember the music when we were at \_\_\_\_\_?*

K: Now you know it is emotional. She gave you the key so you know something has changed in the environment and you need to elevate the soul. You need to elevate the emotion. ZnO is 80%, CO2 is 20%. The patches are 80% ZnO and 20% CO2 for elevating the emotion. She gets the feeling

she is in China. She says she will go back one day now that she is stronger. So, she starts talking to you. There was no dementia at all. Dementia was gone days ago. It is very easy. Emotional dementia means you still have to support with the drink and with the inhaling. They just 'wake up' and they remember everything. I have people who used to love making pancakes and now 3 weeks later they can make pancakes. 6 weeks later the husband is in the hospital and she pays all the bills and everything else, because now she has the strength to stand on her own. He is irrelevant. *I forgot how to make pancakes because he loved them and I hate him so I don't need to remember how to make pancakes. Now I make pancakes because I enjoy them; he doesn't exist any more.*

K: look in the social structure where the dementia has come from. What has happened? 3 to 5 years back they give the full story and then you know you have to treat the physicality. Dementia is one of the easiest things to reverse using this technology because you elevate the emotion.

Q: this particular lady is my auntie and I love her so much. She lost her husband about 20 years ago. I have gone through the previous classes so we asked her whether he used to play a song that used to make me cry as a child. We asked her to try to remember some of those things and she got quite shaky. It would seem to me that it may be a combination and it's the emotional detachment coupled with the loss of her family. I'm hearing what you are saying and I am going to make it my job to treat her because we have a family member trying to steal her money. I love this auntie so deeply and I want to help.

K: understand that your help is not her need. You have to understand what she wants. Otherwise you impose another pressure on her.

Q: actually she loves me and I know she will accept help.

K: yes, but sometimes it is the story of the prince and the cow. You have to feed it to nourish it so that the prince benefits from the cow. Sometimes you cannot go directly in but you have to create an environment that they consume and they gradually walk out of it. Don't forget you think they do not remember. A lot of people who suffer from dementia come back and ask why you did a certain thing on a certain day. You say, *I thought you had dementia and you didn't see anything.* And they say, *I saw it but I didn't want to say anything.*

K: you have to remember that dementia is one way traffic. What is not coming out of their mouth does not mean that they do not absorb and

understand everything that is happening. Many people you bring out of dementia start a big hassle and problem. *You did this. I was watching it.*

K: I was explaining this recently. We had a case where a wife was in intensive care and dying and they could not hold a hospital bed for her and said she could go back home. She and husband had been married 30 or 40 years and they sent her back home. She had been in the hospital for 3 to 4 weeks waiting to die and it didn't happen. In those 3 to 4 weeks the husband had redecorated the whole house from top to bottom rearranging everything. The house wasn't touched for 30 years. She came home and asked why he redecorated. He said he thought she was going to die so he started living. And then 3 weeks later she went to the hospital and she died when she realized that she was not needed and the husband had blocked her. We have to understand the emotion of both the man and the woman. We have to understand what they hide inside.

Klaus from Austria: we see the dementia going out of consciousness. Every path goes to another dimension. If they cannot make their life one way on this consciousness they go to another level of consciousness. This is what we see.

K: yes, but they do it consciously. It not an unconscious action, it is fully conscious. *Nobody listens to me so I lock myself out.* A lot of women do this and the problem is that the women do all the talking and get everything. When it comes to a point they cannot get their way, they become in the dementia state because now they can live in their own kingdom. The human body is very complex but the emotion is very simple.

Gracie: Dr. Klaus a lot of Chinese doctors are coming to ask when they can join the teaching.

K: this is a different Klaus. Let me explain that as you are aware very soon we will be in China. These will be addressed. The traditional Chinese doctors need different access as most of them do not speak any English. What we have as a problem at the moment is if we bring such a large number of the Chinese doctors into the teaching how do we get the response to them and the response of their patients back to us? This is something that I am quite aware of. We would love to have the Chinese alternative doctors with us and be part of this but they have to join the teaching where the clearance for their position that they are a practicing doctor has to come from the Chinese community to us for us to accept this. We have to raise this with the Chinese authorities because anyone can claim to be a doctor in

China. We need clarification. In the rest of the world we can check the references. We need someone in the Chinese KF to set up clearance for the doctors. Some people come in and abuse the information and cause problems for themselves and others. This has to be done by the Chinese for the KF to vet that these are doctors who are practicing and they carry authorization from the government to practice. At the same time they can participate in the mutual way of teaching and being taught. We don't know how to solve this.

Gracie: we can solve this and organize them as a group and every communication goes through the translator. The translator will collect all the questions and answers.

K: you have to make sure these are practicing doctors.

G: yes we will do that.

K: they can join in with a translator and register the translator with Dr. Klaus. One or two doctors who speak English can be the speakers for the group. This can be done in just a few days.

Gracie: that is great; we will do that.

K: Dr. Klaus are you there in the background and can you join this discussion? He is usually there. We are aware of the Chinese doctors and we have the same position with the medicine men in Africa. It is our internal problem, how to find correctly who is who. We see people who have no clue and call themselves medicine men and cause mayhem and they think they are right. Some do good work. We came from medicine men that carried the knowledge. That is why we are here. They did this as father to son. (1.58.21 minutes).

Gracie: we are planning to have a meeting with Dr. Klaus and have all the doctors who are applying to attend and he can make sure they are suitable for the teaching.

K: there is a group of 600 to 700 Chinese doctors and if you speak to Professor Zhu he knows who they are. If you can put this out they can bring this group of doctors into the teaching. It is a team of alternative medicine Chinese doctors. There are 3 or 4 groups. As a lot of you are aware, Stanley can you tell us how the different languages are going now? There are Chinese and Japanese teachings every Sunday.

Stanley: the Chinese teaching is every Saturday morning and Ruth is hosting. We are talking with her now. The Japanese will continue this Sunday. We have 16 languages running now.

K: which ones are they and where are they found if people want to go to the teachings in a different language.

S: for the public anyone can join. For the private teachings they need to apply at [kfssi.org](http://kfssi.org).

K: what about public teachings in the foreign languages?

S: there is a Facebook page that Jacky created for the time being.

K: can you put this on the screen? Which languages are going on now?

S: Chinese, Japanese, Hungarian, Armenian, Polish, Turkish, French, German, Italian, Bulgarian, .....

K: we have moved the KF on facebook ...

S: you are talking that we are streaming the English teaching right now on Facebook. Before we were streaming live on Youtube and Live stream and now we have Facebook. This is only for public teachings in English and not other languages yet. They are only on Zoom. I forgot the Dutch, the Norwegian, Spanish, Tagalog (Philippines), Vietnamese. We will do the page on [kfssi.org](http://kfssi.org) for the education and the public teachings. Within the language communities there are a few who are coordinating and spreading the information to all the portals. Each language has at least one who is leading the community. They come to the public teaching and then apply to become a student and get access to the foreign language teachings and all the recorded teachings since May 2015.

Jacky is sharing the KfSSI education on the facebook page that he takes care of. Most of the people are coming to this platform.

K: go back up on the page. There is Slovenian,...

S: we are inviting people to come in and encouraging them to present for that language community. They apply to become a teacher and get access to the Zoom account and the language ID and start the process. There is another initiative for creating for all the teachings to increase the spread of knowledge. There is a huge team that is co-coordinating for all recordings since May, 2015, first in English and then subtitled in other languages. For the private teachings only the students can participate. It is harder to do because there are not millions of people. KfSSI has the main mission of spreading the knowledge. Send an email to [kfssi.org](mailto:kfssi.org) and start the teaching in your language for one hour per week. When you expand the community you can do this step by step to the private teachings. We are also starting with Hindi and Russian.

K: I got a note from Dr. K that [cancer@spaceship.org](http://cancer@spaceship.org) will be monitored directly if anyone wants to join the injection trials for 80 people. If you are

looking for the cancer trials please go directly to this email and we will set up the procedure for doing this. Dr. Klaus do you want to add?

Dr K: what we have set up for the medical teaching is that we transcribe in the written form in English and then it can be translated into different languages. This is already set up.

K: let me jump in; I tried to do this for years. You have started the wikipedia of the KF.

Dr.K: I prepared this for months and I asked the therapist doctors online if they would help me. The site is very easy to edit and the knowledge can be summarized and compressed. There are several doctors and therapists who said they will add information to it. There are 2 parts—one is theory where we describe from the first contact. It's kind of a handbook for doctors' therapy. The second is a database for every disease and what plasma therapy can be added with the gans technology and what devices to use when people have specific illnesses. We want to add the emotional part as it is the basis of all diseases and illnesses. We are setting up the emotional part of when the difficulty started and quite a few doctors and therapists jumped on it to add their knowledge. I worked on this for months and announced it yesterday when you dropped in to the teaching.

K: why can't we extend this to full-blown wikipedia of plasma technology for all aspects added to it?

S: you mean in the public?

K: we make the gans plasma wikipedia and we control it. I tried to set this up years ago. Now that you have started it maybe we can start the whole wikipedia of the plasma.

S: we have a few pages to show the public.

Dr K: there are some contents from the medical teaching and there may be some data information in it. I want to have a closer look that there is no information from the medical teaching.

K: can we make it so the doctors can go into one area that is not public?

Dr K: yes, this is possible.

K: the ones on agriculture could add their part; the ones on energy could add their knowledge to it. We could call it plasmawiki or whatever.

DrK: yes this is possible.

S: so some would be private and some would be public.

K: as long as we have control over it, then it doesn't get rubbish in it.

DrK: the system of wikipedia we have looked to see what should be public and what should be protected for the doctors. Let me read through it and then we can make it public.

K: this is fantastic and we will put monitors on it.

R: here is an idea—plasmopedia.

K: we have to find a name that everyone can go to it. In the next 2 or 3 weeks the papers of the Ghana conference will be released. This is how we have to bring and add to the knowledge. Plasmopedia has to be brought in and people can add to it. What we see is that we need this with the research coming in.

K: we have to make another announcement that Ghana KF will be a separate page on the internet. You will see a totally different presentation of the program on it and it's very different from the KF program. Stanley can tell us how this will be done.

S: yes, we are working on that to create a different experience for the Ghana website. The page will be in a different form than what we have now.

K: in the short time we closed all the credit card payments, you will soon see the credit card payments back on the website. That makes it easier for those who want to pay through the cards; the structure should be completed in the next several weeks. The credit card has been signed up for and the KF Arizona will start selling items this week and you can purchase on line. Ghana will be online and you in the African market can purchase. It is set up for energy units and water decontamination. This is what the Ghana factory is concentrating on. Systems are getting built to meet this part of the planet's need for support and providing for clean water.

K: You will see these on GhanaKF that will deliver specific solutions for specific needs of the continent such as malaria. 17 nations are affected by malaria across the planet as well as HIV. 90% of the Ghana team is scientists, masters and PhDs. The first wave is all nuclear physicists. We are training the elite of the scientists to teach the public in Africa. We look to carry the production lines geared 99% to African. We do not lose our new generation of scientists; they can have the luxury of being home in Africa. This is part of the ethos of the KF and we have put a lot of effort in this. We can change the position of AIDS in Africa and deliver the technology for clean water.

K: we see the exportation of water by the European nations to Africa. Millions of dollars are siphoned off. This way every person and every house will have access to clean water. You will not see this in the European market. People die everyday from malaria in Ghana and Africa. In Europe

nobody is interested. We don't bring the slavery of the knowledge; we bring the beauty of the knowledge. Most of the people in Ghana are of the highest level of education. We cannot do this in Europe or America. We are set up to not import in Ghana. In China we are set up for the Chinese. We have to make the change. This is very important.

K: Peru KF manufacturing is in operation. Kenya and Austria are ready; Togo needs to have documents finished. Singapore and Taiwan will be signed up soon. We see the operation will run across the world, but everything stays local. We will bring security and respect. I explained in Ghana that it has some of the top scientists in the world and now we are taking the respect back to Ghana, Peru and Kenya. We have to make our local people satisfied. Then we do this as one nation.

K: we have established KFspaceship institute in Ghana with our own launch pad and the latest research will be set up in Ghana. People who left the continent to find peace somewhere else can come back home. We thank the Ghanaian government for making everything possible for the first spaceship knowledge. We hope in the next few weeks to invite the Mozhans to go to Ghana. They won't be building; it is already built. We have the highest level of security. Those who come to Ghana will sit next to the Ghanaian military and scientists as teachers. We teach 4 to 1 for every European or people outside of Ghana. We teach 4 to 1 Ghanaian scientists to become part of the space program. (2.32.49 Minutes).

K: it will take us a few weeks to organize and set up the whole place and then you are welcome to come to Ghana. Those of you who applied for the Mozhan program know where you are to be heading. We need the time and place and I will be there to teach in the first sessions and it will be taken over most likely by Ghanaian Air Force Officers who will teach you everything about flight. You saw Ghanaian officers at the Ghana conference. Now we bring them to the flight system of the government. They have to use their space to teach and we teach them how to become men of space. We do not get involved in military, but we get the men who already know about flight to bring their knowledge of how to control and be a part. Our offer goes to all the nations with Air Forces; you are welcome to join us in Ghana.

K: this is what we promised and this is what we deliver. Teachings will be done in the Mozhans program in the most secure spaces in Ghana governmental offices and this allows us to share knowledge. Ghana KF as a

limited cooperative with the Ghanaian government has to be part of the next step in delivering the knowledge freely to the nation. And, a lot of this work has been done by Benjamin in Ghana over the past year to bring this about. We supported it. We know we will succeed because the nation is the whole of the planet and not just the Ghanaian nation.

Zane: you are my hero and I have a question. Since I started building the devices and getting into the gans, I am surrounded by nothing but plasma.

K: by what?

Z: plasma. I have this light behind my eyes and it's really bright and I don't understand it. Maybe you can explain a bit about it.

K: I don't know what you are talking about, can you explain.

Z: when I am sitting around there is a brightness behind my eyes almost like a light in my head that I can almost see in front of my eyes. Maybe I'm going blind?

K: you better see a doctor to get an explanation.

S: maybe this is the right time for Gwata to come forward and invite more people to the agriculture program; we are looking for people from other fields to join the program.

K: let me clear this point with Zane first. Please explain what you see and see a doctor to see what is happening.

Z: I almost have this kicking inside of me, like a motivator and I'm getting close to something. I am trying to produce plasma from gases to create matter. I've been collaborating with a few people on ideas on how to acquire that. So it would be creating nitrogen, oxygen and hydrogen and bringing them together. Maybe I am going in the wrong approach but I know there are no motors in space.

K: there is something that now that you brought this up that it is time to speak about it. some of you who have been developing and making stacker units, or different apparatuses, if you place in the liquid gans environment, for instance like placing a stacker unit on an 'island' in the tray liquid plasma, you will find that your performance of your system totally changes and you reach different dimensions and different strengths. Last night we were looking at the operation of testing the fields and the impulses and how we can do. It is very strange that our innovation people do the tests, but they don't see how they achieve the tests. So the next step should be naturally understood and so I don't teach it. We see 18 to 20 feet field expansion from the center and maybe more. This is spherical and we have seen the

shape of the donut with the full plasma going 10 to 12 feet high. What we don't see is the concentration of the fields.

K: those of you who work very closely with the gans and the plasmas try to make a condition of collaborating different aspects of the technology together. You will find this changes a lot of things for you. Those of you who work with in medical section, I am sure you know it is traditional that in the East when someone has a high temperature we put them in the water and we put some 10 to 15% alcohol (a small amount) with the water so it covers the upper leg and from the knee down. Very slowly it takes the high temperature away and you find that within minutes people lose their fever.

K: Reverse this knowledge backwards. What if you make a gans water and stand in it? Use the gans water with a mixture of CO<sub>2</sub> and ZnO. You transfer and this is exactly as we do with the plants, with the vegetation. We see in the agriculture that when we put CO<sub>2</sub> to the plants, the plant changes along with the whole environment of the plants. They get better harvests. We now have greenhouses; why don't we make that a part of us? When you put the gans water and you stand in it and put your feet in it, you separated from a new condition of the earth. You have created a separation with a new system, a new plasma in respect to the way you position yourself. You don't need to stand in it, but if you put a tray or a bucket of gans liquid and put a stool in it to sit on, this gives you a totally different atmosphere. Put the CO<sub>2</sub> and the ZnO in it. Try CuO<sub>2</sub> liquid plasma and feel and measure the change. This is something vital you need to do.

K: a few months ago I talked about this in one of the teachings. You create your environment and this is your shell where you are at peace. Change the ratio of the CO<sub>2</sub> and the ZnO and see how you find happiness and peace. This is what we heard from our Chinese friend. It is time to make an environment for us. We talked to the doctors where there are rooms where there are gans. Anybody can do this in their house. You find high temperatures; you find not being at peace emotionally. Make your own island and walk into it. Stand in it and don't touch it. Let its field bring balance to you. Anybody can do that.

Z: okay, I can do that.

K: the thing is, this is what we need to do to extend the knowledge. As I said, the teaching is finished; now the depth of the knowledge has to open up. You don't need to touch and you don't need to drink. You change the way as we see in agriculture. You don't need a greenhouse. Now the

greenhouse is a problem for us because now the fields create a shelter and environment. I explained this to people in a meeting yesterday. I explained to them we do this with the plants and the guy said you don't need fertilizer.

K: Now the greenhouse is a problem for us. We need to understand that now we create a new greenhouse for the plants and that is why they grow so fast. I explained this to our agriculture people. Greenhouse is now a problem because now we understand we create a condition that attracts amino acid and now we know that plants use amino acid from the atmosphere to live. We are putting a shield over the plants like a greenhouse and we reduce their interaction. It is the same with human body. Put a bucket in the garden; stand in the middle of it or lie in one without touching it. Change the atmosphere and see if you feel differently. The emotion changes and you find peace within yourself. You create a peaceful environment for yourself and you start finding your peaceful emotion. And then you find the path to your soul as I was teaching this morning.

K: it is you who has to understand 80% of the information carried in your emotion comes outside the neuro system. The neuro systems are for the physical part. I explained this many times before. You think that you feel pain because you touched it. That is the physical part. You have not touched the emotional part of it that goes outside; it's too slow. The neuro systems are the matter state. Linkage outside is faster. Create your own greenhouse for you and your family and bring peace. Then you find out that the life and dimensions of expectation change. I said it this morning about finding that peace which you are looking for because you change the environment around you. The house is too much and everything is restricted. Stand and open it and then you are connected to the universal energy.

K: the houses we have built have become the cages for the souls of the man and not only his physicality because they touch and control our emotion. Stand outside. You are connected and see a different life. You gain different knowledge of the universe. This is how it is done by many in the universe. It is time to mature in the total understanding. We have done everything and there is no copper plate to be made and how you nano coat it. Now you have the free plasma and it is you who create the condition of its use and what you want to use it for. You can measure the fields. Those of you who have the tools will see it. You go into a machine to see your aura and now you create the aura so that it dictates the change inside.

K: Maybe you can walk into it and you don't need to feed yourself. Maybe you can put the person with the Alzheimer's in it and they walk out of it without Alzheimer's because they have found the peaceful connection within the environment which gives balance to them. We did part of this and part of it is done by the medical team. They put the cores on the top, the bottom and the sides and put you in that surround. This takes a lot of time. This can be done by anybody; you call it *a peace island*. Walk into it and find your peace in it. It elevates through your leg and it goes and creates its own circle so you become the central column and literally the plasma of yourself. What you have done is create a separation from the heavy pulls of the planet. You are in your own shell. Then your beauty will come.

Z: thank you so much.

K: you are welcome.

K: is this a solution for people with cancer of the emotion? Yes it is. Is this the solution for those who want to be at peace and without pain? Yes, if they decide. Don't forget the mixture is your separation zone from what has created the pain. In a way you become a separate island, a second separate moon from the planet because now you have separated the connection. And if you go to the man of space they understand and know what I am talking about, you will make a mixture according to the origin of the position which you came from. You will live where everybody came from. Many lost their tribes and now this is time to go back home.

Klaus: this is "Klaus 2" from Austria: we can run a test with a sewage plant in my home part, the purification plant for 10,000 people. We want to test with CO2 and maybe some medical infusion system of gans water to drop into and clarify.

K: we have already done the test in Ghana and there is something I have to tell you. This is a gift to the rest of you. A lot of you had problems identifying what you made, what the material was. The collaboration with KF and Ghana Atomic as a joint venture allows us now to make Ghana the research center for any test you want to do. What this means is that if you found a material and you want it to be tested and you are looking for somewhere, write the KF Ghana and send it to the KF Foundation Ghana Atomic. You have to pay for these because this is governmental organization. But we have access to everything that has not been accessible for testing. As part of this you will see the new systems which are water treatment and waste water treatment contamination.

K: These systems will be marketed by Ghana Atomic in the coming weeks. We have already done this for a system for the water decontamination for bacteria and it works. Benjamin has delivered recently a new material to the labs which is getting tested. We usually get results within 24 to 48 hours.

K: Now KF has the research center facilities with international standards that we can use even though we expand on it to start establishing the latest laboratories within the structure of the government. If you want to test something we talked about plasmopedia that we create and these details will go in very soon. The tests and papers are there and as we are part of One Nation, One Planet, we will add these to it. We can test very rapidly if you want to test something. If you are looking at water decontamination we have seen the annihilation of bacteria doing the cleanup very rapidly. We have tested it and there are official reports signed by governmental research labs and this makes a lot of work easier for those of you who are working and showing that water can be cleaned up.

K: I will introduce some new material for the teaching because of the facebook. Let me know beforehand that we don't overrun it. There is new material which I touched on. Any of you who have a problem with bacteria and not viruses, but with germs especially, go back to the teaching and understanding the totality of what is part of the germ structure and what is part of the bacteria structure. Part of the germ structure especially what we see in what we call the structure of the water systems and in the human body, is the understanding of the power of nitrogen. Nitrogen gas has to become part of the work that has to do with bacteria and outside viruses. Many of you have tested the things we have done. We have shown we can overcome all the viruses.

K: but we do not see the bacteria and microbes that we could not handle. In the chain of protein of amino acid the main player for change is nitrogen. So those of you who grow bacteria and microbes, CO<sub>2</sub> and CuO are good for viruses. Depending on the strength of the virus you can go higher to Cesium, to plutonium or higher level materials because you have to be above the germ or virus level so that it can interact with it. So, on the other hand you can decompose the whole structure of the protein amino acid. The easiest way is to control it. The controller of amino acid (COHN) is nitrogen. Oxygen is the holder, carbon is the communicator, hydrogen is the giver; the controller is the nitrogen and in the matter state this is called centralization.

K: If you want to handle bacteria and microbes which now have amino acid structure you don't need to destroy anything. Just create different strength amino acids of nitrogen. We have facilities to be able to develop pure nitrogen gases with the facilities available to us at KFGhana. We have a nitrogen ice maker, blocker and gases. You will see rapid effects. If you have the viruses and you have created a good gases of the condition in it, you will solve part of the problem but you will see that the bacteria are not touched, or the microbes. You will probably find a solution in CuO and NO, NO<sub>2</sub>, or N<sub>2</sub>O depending on how you produce your gases (of nitrogen). Don't forget all these are available in the gases state.

K: I have never taught this, but in the past few weeks I have seen a need for adding this knowledge. Now we are testing and some people are producing it. In Italy we are developing it for decontamination. The beauty with this is that lands that have been heavily loaded with nitrates can now be cleaned up this way and it's the only way you can clean it up. The gases will allow the transformation of energy from nitrites and it can decontaminate lands very quickly.

K: when you have bacteria and all this components in the farming which is with high nitrites you can change the condition. What you do is you choose in the very high order by order of magnitude and place as the normal way and the material just transfers the energy and nitrites change by the position to carbon. That is all it does and this is what your body does. Because of the high level in transaction it becomes carbon and you find a rapid response in respect to nitrites. But there are 2 or 3 other solutions to this because you can join it with zinc, copper or carbon. N(itrogen)-C(arbon) connections are one of the biggest powerful systems in the world of bacteria but nobody has ever used it.

K: This is part of the knowledge you can add to and develop. If you are going to a source you will find out you have success with viruses and not much success with germs, because now you have to go through the matter state strength. When you come to that point it is the strength of the fields of the matter state which has led to the creation of the germs. So handle it through the (use of) Nitrogen. You don't destroy it, you find new balance and you literally open it up. When you look at the culture plates you will see the effectiveness and how they will change. You can use nitrites as the farming fertilizer with the high concentration of nitrogen to produce these

gans, but you need to see what else is in there so you can extract that to get the nearly pure condition.

K: as I said we just opened the door of the knowledge of space and there is a lot to learn. So with water decontamination do not use CO<sub>2</sub>; you need to use CuO and ZnO. Your success with CuO and ZnO is more or less the same, but you will see better results with the CuO. With the germs and the bacteria in these plants you have to go for the nitrites with nitrogen and one of the best ways to make gans of Nitrogen is the nitrogen ice blocks because you can change it very quickly.

K12: thank you for giving me this understanding and I will get in touch with Ghana Atomic Institute.

K: just write to the email that will be working in the next 72 hours. It is [info@kfgghana.org](mailto:info@kfgghana.org). It has to go the KFGghana and will be handled by the Ghanaian scientists and the response will be given. Realize that all these scientists are highly educated and can find solutions on the floor of how this is done. The research foundation is KFGghana registered limited partnership with the government of Ghana. It is the first time that KF has established a full corporation with a government and we see that three more are coming in the next few weeks. Then we bring everything together with KF and governments are connected and link up to work as one organization of One Nation.

K: any research or development you want to have tested in the laboratory you don't need to go any further. We have the facilities of the full nation of Ghana at the disposal for humanity. So, as part of the foundation you want to do research we can organize researchers to come in and do what needs doing and then go back to Ghana. You have to understand the condition of the mission and the respect of the nation. You are not going to "Africa." You are coming to a more advanced nation than most of the European countries' labs. We will expand on this more and more.

K: KF Ghana is a partially owned government operation and it is not a limited corporation with individuals. We have the full support of the security services who will respond heavily to any abusers. We made sure of this. For those who thought they can create the mayhem they have done up to now, we will respond respectively because you are handling a government. You are playing and this time we play 'national game time.'

K: all the links and operations are fully monitored by government security services. We made sure of this and this is why we came here to make sure humanity comes to a new point of understanding. Any abuse or out of line that damages the integrity of KFGhana will be responded to by the national parameters. This is how it should be. Rogues have to stay on their own. National scientists and researchers come with the idea they are on their own and we support you. This way we establish one of the biggest research centers now connecting Ghana Atomic which is KFGhana and Tokyo University. In the next few days we will announce the establishment of a joint venture, a spin off between KF, \_\_\_\_\_ Holding and Tokyo University collaboration between the government institutes and KF. Even though we are already researching there the results are so heavy that we have gone into shareholding between the government of Japan and KF research and development. We join the two—Ghana and Tokyo, KF as part of the university and development to collaborate and the first joint venture has already taken place. This is how we are developing this. The next step is China and then another African nation and we are going to the United States and Canada in the next six weeks. We see an opportunity of peace with the new presidential election in the United States and we explore opening up as collaborators.

K: if you develop something and want to know what it is we will give you a secure line and with the package of material we will tell you what it is, and it depends on your paying or donating to the KFGhana bank account which is monitored and more or less controlled by the government. Everything you wanted up to now is now at the disposal of the KF. We are not saying it will be done; it is already done, sealed and signed and KF Ghana has been registered and is in operation and government of Ghana is a shareholder in the structure and they protect their shares and their interests. You developed material and you want to see what the material is that you developed, just send to [info@kfghana.org](mailto:info@kfghana.org).

J: I want to ask Mr. Keshe about the outer core, the energy in Arabic? Is there anything we can do or is there anything on the way?

R: that is a good question and there are some things going on in the background, but I'm not clear.

S: for the teachings in Arabic we need the first candidate to come forward and the teachings can begin. We are preparing the Farsi. If you could

translate the teachings into Arabic that is the beginning. This is where everyone started. Send an email: [education@spaceshipinstitute.org](mailto:education@spaceshipinstitute.org). Thank you for coming forward.

Gwata: I just read on the chat that two people said they had applied and had not been replied to. I replied directly on the chat to one and one letter was returned as undelivered. Once I wrote it on the chat, I received one application. In general we are looking for experienced farmers and agricultural researchers. They can write to [agriculture@kfssi.org](mailto:agriculture@kfssi.org). We will reply to their applications immediately. Thank you.

S: we are encouraging people to join our private teachings in agriculture. For those specialists who can prove they have field experience, it is free. Just go to the application process and Gwata is reviewing the application. What we are teaching is very exciting. Sooner or later this knowledge comes to the public but we would like to work with a team of specialists in the field who have been conducting experiments around the world. You can be in direct contact with other researchers and share the experience and improve your part. You are all welcome to send the email to Dr. Gwata. I hope to see you in the classroom soon.

K12: This is Klaus from Austria and I am one of the two Dr. Gwata speaks of. We cannot find the application to fill it in for the agriculture part.

S: use the email address and we will try to get things done faster. There were some difficulties updating the form. Send the email.

James: are environmental scientists excluded from the agriculture teachings? Is environmental teaching coming soon?

S: I don't know of any plans for this.

R: perhaps James would like to lead that group on environmental teaching and inviting other scientists in.

K: I got dropped off. The environmental work is already set up and we have a man in Italy working on it and it's just bringing it to the KF work is full time. There will be a lot of environmental changes. The decontamination of the land is one of the major problems in Italy. We have a collaboration and there are a lot of radioactive materials around. The beauty of the set up in Italy, everything in scientific data is fully researched and tested in laboratories so the environmental clean up is very precise.

K: what we cannot do there to help any of you across the planet, the beauty of KFGhana is that we have access to national laboratories and in the coming time KFGhana laboratories will have the latest possible systems.

There is a lot to be done on the environment, the earth and ground pollution. We know we have a weakness. Alez in Nigeria is working with oil contamination. There is a huge problem with the land and sea oil contamination from exploration and more. The Gulf of Mexico and Nigeria have a lot of contamination. We are looking into solving the problem. We have had a lot of success yet, but there is a lot going on in the background to find the solution in ground pollution. In Italy we have a huge amount of radioactive contamination and water pollution.

K: if you see a solution or you want to find a solution and you have something you want to test, send it to KFGhana and we will test it in the laboratories with our top scientists. The agriculture and environment have to be separate. These are already being worked on by the team in Italy.

R: we had some problems with the live stream with two interruptions of the internet so I'll upload the complete workshop once we edit it in. it's available on Youtube.

K: please remember there is a testimonial section on the KF website and use it if you want to post any testimonials. The same is with health. Getting the Wiki set up will be a source of information for people.

R: thank you.

K: let me remind you that those who were the Mozans, Ghana is your destination and you will be taught in Ghana. Your testing on materials can be done in KFGhana with our scientists who can test and evaluate and help you discover what you can do with what you have developed. The website is separate from the other KF websites because it is governmental website that has to be protected. The structure will be announced for biological and cancer tests. In a short time it will be announced as health@kfjapan.

K: We are working on a couple more partnerships with KF and government collaboration on the panels. Now we use the channels that gave the credibility to the knowledge to be used directly within the governmental structure. Please do not abuse it; the only thing that does is harm the others because this is in the hand of all of us. Now we have governments behind for medical research, flight, and for testing the materials and whatever we need in energy. We have the most elite scientists on our team around the world who work with us. Our power and technology has been recognized by governments and you will see rapid expansion. It is your responsibility to establish this with your governments and we support you. We will see a lot

of collaboration coming up with 2 or 3 of the top 4 nations in the world. We have stood the test of time and proven. We add to the knowledge. It has taken man thousands of years to get here. We are like the parents and we have to nourish the knowledge. Change your own environment and become the man of peace. Thank you very much for today.

R: thank you Mr. Keshe. This closes the 146<sup>th</sup> Knowledge Seekers Workshop of the KF Spaceship Institute.
